1. Background

Approval for the construction and operation of Stage 2 of the Moorebank Precinct East (MPE) Development (State significant development (SSD) 7628), operated by ESR Australia &NZ (formerly LOGOS), which comprises the second stage of development under the MPE Concept Consent (MP10_0193) was received 31 January 2018 as consolidated.

This Construction Traffic and Access Management Plan (CTAMP) represents an update of CTAMP-A (developed for Construction Phase A) in order to manage traffic impacts during Construction Phase A and Construction Phase B of Stage 2 of the MPE Development (hereafter, 'the Development').

Within CTAMP-B, a strategy has been established to demonstrate the contractor's approach to the management of traffic impacts. This CTAMP addresses the relevant requirements of the Development approvals, including the Environmental Impact Statement (EIS), Response to Submissions (RtS) and Minister's Conditions of Consent (CoC), and all applicable guidelines and standards specific to the management of construction traffic and vehicle access during construction phases of the Development.

1.1. Development Ownership

In 2022, LOGOS joined the ESR group of companies and since August 2024, the LOGOS and ESR operations have been integrated to now operate under the name ESR Australia & NZ (ESR). The applicant/ approval holder entity remains unchanged at this stage until further notice and references to LOGOS and LOGOS authored documents and/or plans may continue and remains relevant where LOGOS and ESR are used interchangeably.

1.2. Introduction

The MPE Site, including the Development site, is located approximately 27kms south-west of the Sydney Central Business District and approximately 26kms west of Port Botany and includes the former Defence National Storage and Distribution Centre site. The MPE Site is situated within the Liverpool Local Government Area, in Sydney's south-west subregion, approximately 2.5kms from the Liverpool City Centre.

Stage 2 of the MPE Development involves the construction and operation of warehousing and distribution facilities on the MPE Site and upgrades to approximately 2.1kms of Moorebank Avenue.

Key components of the Development include:

- Earthworks including the importation of 600,000m^3 of fill and vegetation clearing
- Importation, stockpiling and placement of up to 250,000m^3 of suitable spoil (separate to the 600,000m^3 of imported clean general fill permitted for bulk earthworks)
- Approximately 300,000m^2 gross floor area of warehousing and ancillary offices
- Warehouse fit-out
- Freight village, 8000m^2 gross floor area of ancillary retail, commercial and light industrial land uses
- Internal road network and hardstand across the site
- Ancillary supporting infrastructure within the site, including:

  - Stormwater, drainage and flooding infrastructure
  - Utilities relocation/installation
  - Fencing, signage, lighting, remediation and landscaping.
- Moorebank Avenue upgrade including:
  - Raising by about two metres and some widening
  - Embankments and tie-ins to existing Moorebank Avenue road levels
  - Signalling and intersection works
- Intersection upgrades along Moorebank Avenue including:
  - Moorebank Avenue/MPE Stage 2 access
  - Moorebank Avenue/MPE Stage 1 northern access
  - Moorebank Avenue/MPE Stage 2 central access
  - Moorebank Precinct West Southern Access/MPE Stage 2 southern emergency access.

The Site location is provided in Figure 1-1.

Moorebank Avenue Realignment Works (MARW) was approved by the NSW Minister for Planning on 14 October 2021 as State Significant Infrastructure (SSI-10053) (Infrastructure Approval) under Division 5.2 of the *Environmental Planning and Assessment Act 1979* (EP&A Act). It is also a controlled action under Section 130(1) and 133(1) of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) and was approved by the Minister for the Environment on 7 December 2021 (EPBC Approval 2020-8839).

The footprint of MARW, which generally runs along the northern and eastern boundary of the MPE Site, interfaces and encroaches on the MPE Site. In order to allow for progression of construction works for MARW (in particular, the northern carriageway), some early preparatory works are required that are located within the MPE Site (where the project boundaries overlap). These works are undertaken under the MPE CEMP, with the MARW CEMP not being relevant to these works.

1.3. Development Consent

The Development was assessed by Department of Planning Housing and Infrastructure (DPHI)under Part 4.1 of the EP&A Act as a SSD. The Planning Assessment Commission granted Approval for the Development on 31 January 2018 and is subject to the Minister's CoC (SSD 7628). The Development has subsequently been modified and approved. The Development, including its potential impacts, consultation and proposed mitigation and management, is documented in the following suite of documents:

- SSD consent SSD 7628, as consolidated
- SSD partial consent (subdivision) 7628, as consolidated
- Moorebank Precinct East – Stage 2 – Environmental Impact Statement (Arcadis Australia Pacific Pty Limited, December 2016)
- Moorebank Precinct East – Stage 2 Proposal – Construction Traffic Impact Assessment (CTIA) (Arcadis Australia Pacific Limited, December 2016)
- Moorebank Precinct East – Stage 2 – Preliminary Construction Traffic Management Plan (PCTMP) (Arcadis Australia Pacific Limited, November 2016)
- MPE *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) Approval (No. 2011/6229) granted in March 2014
- MPW *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) Approval (No. 2011/6086) granted in September 2016 (for Moorebank Avenue Upgrade Works only)

1.4. Development Delivery Phase

The Development construction period is anticipated to be approximately five years, which is generally divided into three works phases.
The terminology for the Development phases were developed from the preparation of the EIS and RtS documentation in response to the language of the CoCs and the need to stage the delivery of the environmental management documentation required by the CoC. Current terminology, and the equivalent terminology from the CoC and RtS are included in Table 1-1.

Table 1-1 Development Delivery Phase Terminology

Development Delivery Phase	CoC A18 Phase Equivalent	MPE Stage 2 RtS Works Period Equivalent
Early Works	Early Works	Works Period A: Pre-construction
	Fill importation (to 60,000m^3)	Works Period B: Site preparation
Construction Phase A	Fill importation	Works Period B: Site preparation
	Construction	Works Period E: Bulk earthworks, drainage and utilities
		Works Period F: Construction and internal fit out of warehousing

		Works Period G: Miscellaneous construction works
Construction Phase B	Fill importation Construction	Works Period C: Construction of Moorebank Avenue Diversion Road (Complete) Works Period D: Pavement and intersection works along Moorebank Avenue Works Period E: Bulk earthworks, drainage and utilities

Additional details of the Development delivery phases are included in the Construction Environmental Management Plan (CEMP).

1.4.1. Early Works

Early Works is generally described as site preparatory works including utilities adjustments and relocations, clearing and stripping of topsoil (top 100mm of topsoil), heritage salvage and fill importation (including virgin excavated natural material [VENM] and excavated natural material [ENM], up to 60,000m^3), establishment of site access, temporary fencing and compound establishment, asbestos and hazardous material removal and the preparation of demolition of buildings.

The Early Works includes but is not limited to:

- Geotechnical and utilities investigation works including potholing to confirm the location of existing services, disconnection of non-critical services (with retention in place), grout filling of disconnected draining lines, and adjustment and relocation where applicable
- Clearing of non-native vegetation, stripping of topsoil and stockpiling of topsoil on site for later re-use within site landscaping
- Stabilisation of areas where topsoil has been stripped with imported clean hard fill or by other methods determined by the Environmental Representative (ER) to have minimal environmental impact
- Removal of asbestos from heating equipment and fire resistant building elements (e.g. fire doors) by a licensed asbestos removalist followed by clearance by a certified occupational hygienist
- Hazardous material cleaning and decontamination in Buildings 67, 69, 81 and 83
- Heritage salvage works in Buildings 37, 75 and 80 on the Development site to recover architectural elements for adaptive re-use
- Importation, stockpiling and placement of up to 60,000m^3 (not exceeding a total of 13,000m^3 of material per day) of imported clean general fill material by truck-and-dog and / or semi-trailer
- Establishment of a site access point at the existing MPE Site northern access and construction of associated access road, utilising existing paved areas with minor

pavement extension as required, to provide for access and maneuverability of vehicles into and through the site in accordance with CoC B10

- Establishment of temporary site fencing, a site compound(s) and temporary car parking areas to support Early Works and construction of the Development in accordance with CoC B10, B11 and B12
- Other activities determined by the ER to have minimal environmental impact.

Any of the activities defined in SSD Consent 7628 as 'Early Works' may be undertaken during the Early Works. All works during Early Works will be undertaken in accordance with the Early Works Management Plan (EWEMP) and required sub-plans.

The approved CEMP and CEMP Subplans have superseded the EWEMP.

1.4.2. Construction Works Phase A (Excluding Moorebank Avenue Upgrade Works

Construction Works Phase A will include all works described in Early Works in addition to bulk earthworks, drainage and utilities, construction and internal fit-out of warehousing and finishing works.

Construction Works Phase A excludes Moorebank Avenue works described in Section 1.3.3. Construction Works Phase A includes, but is not limited to:

Completion of Site Preparation Activities

- Demolition of existing structures
- Clearing of remaining vegetation
- Adjusting the building formation of the site (to final operational levels) within which the Warehousing Compound will be located
- Establishment of temporary batch plant and materials crushing plant

Bulk Earthworks, Drainage and Utilities

- Importation, stockpiling and placement of up to 600,000m^3 of imported clean general fill for bulk earthworks
- Importation, stockpiling and placement of up to 250,000m^3 of suitable spoil (separate to the 600,000m^3 of imported clean general fill permitted for bulk earthworks)
- Installation of on-site detention and drainage infrastructure within the MPE Stage 2 site
- Construction of retaining walls
- Creation of internal road formation by general earthworks (by constructing fill embankments)
- Bulk earthworks and adjusting the building formation of the Development site to final level, including the terminal hardstand
- Utilities relocation and installation
- Establishment of hardstand areas.

Construction and Internal Fit out of Warehousing

- Infrastructure installation (stormwater, power and comms)

- Foundation installation
- Erection of framework and structural walls
- Installation of roof
- Floor slab installation
- Internal fit-out of warehouses (racking and associated services).

Miscellaneous construction and finishing works

- Pavement construction (internal transfer roads and perimeter road), including forming of new kerbs, gutters, medians (where required) and other structures
- Line marking, lighting and sign posting
- Installation of road furniture, including traffic signs and pavement markers
- Miscellaneous structural construction
- Finishing works, including landscaping and general site rehabilitation, where required
- Commissioning of the Warehouse
- Decommissioning/demobilisation of site, including removal of construction compound(s) and temporary construction environmental controls

1.4.3. Construction Works Phase B (All Construction Activities)

Construction Works Phase B will include all works described in Early Works and Construction Works Phase A, in addition to the Moorebank Avenue upgrade works. Generally, the Moorebank Avenue upgrade works are described as construction of the Moorebank Avenue Diversion Road, bulk earthworks, drainage and utilities, and pavement works.

Construction Works Phase B includes, but is not limited to:

Construction of the Moorebank Avenue Diversion Road

- Stripping of topsoil within footprint of temporary diversion road
- Installation of temporary drainage
- Placement of fill and temporary road pavement (e.g. gravel)
- Construction of interface between temporary diversion road and existing Moorebank Avenue
- Installation of temporary road signage, street lighting and signalling
- Transfer of traffic onto temporary diversion road from Moorebank Avenue.

Bulk Earthworks, Drainage and Utilities

- Removal of existing pavement and stripping of topsoil within Moorebank Avenue
- Importation, stockpiling and placement of approximately 600,000m^3 of imported clean general fill for bulk earthworks
- Importation, stockpiling and placement of up to 250,000m^3 of suitable spoil (separate to the 600,000m^3 of imported clean general fill permitted for bulk earthworks)

- Creation of a road formation for Moorebank Ave and the Moorebank Ave Diversion Road by general earthworks (by constructing fill embankments)
- Earthworks, raising the entire footprint equivalent to adjacent areas including construction of embankments and tie-ins to existing Moorebank Avenue pavement level at the southern and northern extents of the Development. (If Moorebank Avenue Realignment (SSI-10053) is delivered, the southern road tie will not be required.)
- Installation of on-site detention (OSD) 10 and drainage infrastructure associated with MAUW
- Utilities relocation and installation

Pavement works along Moorebank Avenue

- Placement of select layer of earthworks material on top of the road formation
- Placing and compacting the pavement layer (concrete, or concrete and asphalt) over the select layer (consisting of a sub-base and base) and bitumen sealing as required to suit the various pavement designs (subject to change and TfNSW design approval)
- Where specified, a pavement constructed out of compacted gravel (roadbase) will be used in lieu of concrete sub-base and base (subject to change and TfNSW design approval)
- Installation of new road pavement, or if Moorebank Avenue Realignment (SSI-10053) is delivered, the new road pavement will be installed to the IMEX Terminal main access point only
- Traffic switching from diversion road onto final, upgraded Moorebank Avenue or switch to the Moorebank Avenue Realignment (SSI10053) if delivered.
- Removal of construction traffic management and progressive opening of the internal road, warehouse and IMEX access roads to traffic
- Removal of road surface, road signage, street lighting and signalling from temporary diversion road
- Commissioning of Moorebank to the southern extent of site, or if Moorebank Avenue Realignment (SSI-10053) is delivered, then commissioning to IMEX Terminal main access point.

1.4.4. MARW Early Works

The MARW Early Works comprises the following activities, within the scope of the CoC for the MPE Stage 2 Development (SSD 7628):

- At the northern boundary of MPE Stage 2:
  - Property adjustments to Piccolo Me Café and display suite including partial demolition of carpark and reallocation of carparking space
  - Provide adjustments to MPE lead-in services including sewer/water meters, communication pits and electrical kiosk
  - Demolition of shared pathways
  - Establishing shared internal pathways

  - Overhead utilities adjustments as required by internal MARW works
  - Provision of local connection for temporary MARW utilities
  - Demobilisation of equipment from the area.
- At the southern boundary of MPE Stage 2:
  - Disconnect and remove 11kV overhead wires to eastern on-site detention (OSD) basin water pump
  - Disconnect and remove pad-mounted substation currently servicing eastern water pump
  - Relocate generator from western to eastern water pump
  - Remove western water pump and associated hoses.
- At the eastern boundary of MPE Stage 2:
  - Disconnect and remove 11kV overhead wires to Hansen Yuncken construction compound.

1.5. Purpose and Application

This CTAMP has been developed to address the Minister's CoCs and the Final Compilation of Mitigation Measures (FCMMs) and is based upon the CTIA (Arcadis 2016), PCTMP (Arcadis, 2016a), Early Works Traffic and Access Management Plan (EWTAMP) and CTAMP Phase A. Pertinently, this CTAMP has been prepared to satisfy the Minister's CoC B2. This CTAMP-B addresses all traffic impacts associated with the Development including the MPE Site and Moorebank Avenue Upgrade Works and is designed to incorporate the EWTAMP and CTAMP-A and supersede them.

The purpose of this CTAMP is to describe how vehicular, cyclist and pedestrian traffic and access will be managed during construction and provides methods to monitor and reduce impact to traffic and access during the construction period.

This CTAMP provides a structured approach to manage traffic and road safety issues for the duration of the Development's construction activities to provide a safe road environment, minimise impact on the surrounding road network and maintain access for all road users and the local community.

Specifically, the purpose of this CTAMP is to:

- Manage traffic and access in accordance with the Development approval documents
- Review and consider the CTIA (refer to Appendix K of EIS) during construction
- Minimise impacts to traffic and access during construction
- Provide a safe environment for vehicular, pedestrian and cyclist movements at all times during construction
- Maintain accessibility for the local community and public transport services
- Provide regular information to road users and local communities regarding any changed traffic conditions.

This CTAMP-Phase B must be reviewed and endorsed by the Development's Environmental Representative (ER). Once ER endorsement is received, CoC C8 requires

the CTAMP-Phase B to be submitted to DPHI for approval by the Secretary no later than one month prior to the commencement of a new phase of the Development. This will also satisfy the requirements of CoC A18 that requires the DPHI to be notified at least one month prior to the commencement of a new phase of the Development.

The most recent, approved version of this CTAMP-B will be implemented to manage the Development activities.

1.6. Staged Submission of this Plan

Subject to the approval of the Secretary (CoC A14), the Development has elected to stage the submission of a number of strategies, plans and programs that are required by the CoCs based on the Delivery Works Phases (for a detailed description of the relevant phase, refer to Section 1.3 of the CEMP) identified in Table 1-2.

In accordance with CoC A15, Table 1-2 identifies the stage of the development to which this document applies, and the relationship between any future stage. The trigger for updating the document is also identified in Table 1-2. When a document is updated, the most recent version of the document will supersede the previous version(s).

Table 1-2 Staged Documentation and Triggers to Satisfy CoC A15

Delivery Works Phases	General Description of Works	Current Document	Trigger to Update Document
Early Works			
Early Works	Utilities adjustments and relocations, clearing and stripping of topsoil, heritage salvage, fill importation, establishment of site access, temporary fencing and compound establishment, and other activities determined by the ER to have minimal environmental impact	Document prepared to address Early Works only	This document has been updated for this CTAMP
Northwest Priority Area			
Northwest Priority Area	Site establishment and installation of erosion and sediment controls, clearing of non-native vegetation, remediation, removal of existing pavements, utilities disconnection, adjustment and relocation, demolition of buildings including those containing asbestos, and the importation,	DPHI Approval Letter for Northwest Priority Works dated 29 March 2018 indicates relevant controls from the EWTAMP are applicable to the Northwest Limited Works Stage.	This document has been updated for this CTAMP

Delivery Works Phases	General Description of Works	Current Document	Trigger to Update Document
	stockpiling and placement of spoil		
Construction			
Construction Phase A	Early Works activities, bulk earth works, drainage and utilities, construction and internal fit-out of warehousing and finishing works	Document prepared to address Construction Works Phase A only (does not address Moorebank Avenue upgrade works)	Prior to the commencement of construction
Construction Phase B	Construction Phase A activities, construction of the Moorebank Avenue Diversion Road, bulk earthworks, drainage and utilities and pavement works	Document prepared to address all construction works (Phase A + Phase B)	Prior to the commencement of Moorebank Avenue upgrade works

1.7. Objectives and Targets

The following objectives and targets are set for the management of traffic and access impacts associated with the Development (refer to Table 1-3). These objectives and targets were developed in consultation with the Proponent, technical specialists and the Development Representative, based on collective industry experience and best practice. Objectives and targets are also derived from the MPW Traffic, Transport and Access Provisional Environmental Management Framework in accordance with MPW EPBC Approval for the construction of the Moorebank Avenue upgrade works.

Table 1-3 Objectives and Targets

Objective	Target	Indicator	Timeframe	Accountability
Minimise impact to the environment by implementation of management measures	Zero environmental incidents associated with traffic and access	Number of environmental incidents relating to traffic and access	Duration of construction	Contractor's Construction Manager (CM)
Provide a safe environment for road users through: Implementation of traffic controls and isolation of work site hazards that comply with the best practice, Roads and Maritime requirements/guides	No death or injury to workers and the public as a result of traffic incidents	Number of safety incidents relating to traffic and access	Duration of construction	Contractor's CM

Objective	Target	Indicator	Timeframe	Accountability
and the Australian Standard/s				
Minimise disruption to traffic operation, road users, pedestrians, cyclists and access to adjoining properties (private and public) through: Maintaining the road network functionality Provide an adequate level of signage and community notification is in place where changes to existing road access conditions prevail	No traffic related infringements or penalties	Number of community complaints relating to traffic and access	Duration of construction	Contractor's CM
Establish and maintain awareness of the importance of ensuring impacts associated with traffic, transport and access associated with the Development are minimised.	All Development and workforce personnel to complete an environmental induction, which will include information on the importance of minimising traffic, transport and access impacts.	Number and percentage of personnel that have attended site induction	Duration of construction	Contractor's CM
Any change to road or pedestrian access should not adversely affect the ability of emergency services to respond to any incident	Emergency access review included in all daily inspections and toolbox meetings	Number of incidents relating to emergency vehicle access to the site or adjacent properties	Duration of construction	Contractor's CM
Minimise complaints by implementation of the management measures in this plan	Response to traffic related complaints in a timely manner, as outlined in the Community Communication Strategy	Number of community complaints relating to traffic and access	Duration of construction	Contractor's CM DM Communication
Compliance with Road Occupancy Licence (ROL) conditions (if ROL required Refer to Section 2.2.1 below)	Zero non-compliances	Number of non-compliances relating to ROL conditions	Duration of construction	Contractor's CM

1.8. Consultation

CTAMP-A which precedes CTAMP-B (this plan) was prepared in consultation with Liverpool Council, TfNSW and RMS as outlined in Table 1-4. The comments from agencies on CTAMP-A have been incorporated into this CTAMP-B document where relevant.

CTAMP-B has also been prepared in consultation with Liverpool Council, TfNSW and Roads and Maritime, as outlined in Table 1-4. Supplementary information to support consultation undertaken is included in Appendix B.

Table 1-4 Consultation Summary CTAMP Phase A

Agency	Dated	Person Contacted	Comments	Status
Transport for New South Wales (TfNSW)	08/03/2018	TfNSW representative	Draft plan emailed for review and comment.	Closed

	18/04/19	LCC representative	Email sent indicating that actions from meeting on 15/04/19 are being addressed.	Closed
	29/04/19	LCC representative	Email sent requesting an update on progress of review and providing an update on actions addressing issues from meeting on 15/04/19.	Closed
	10/05/19	LCC representative	Email sent indicating that LCC comments were addressed in an email sent on 29/04/19.	Closed
	03/06/19	SIMTA representative	Email sent requesting an update on progress of review	Closed
	04/06/19	LCC representative	Email sent confirming that SIMTA have adequately addressed LCC comments.	Closed
	04/06/19	SIMTA representative	Email sent confirming that LCC comments would be submitted to SIMTA by 07/06/19.	Closed
	06/06/19	SIMTA representative	Email sent providing comments on CTAMP-B.	Closed
	07/06/19	LCC representative	Email sent confirming that consultation with LCC is now closed.	Closed
Campbell City Council	26/03/19	CCC representative	Draft plan emailed for review and comment.	Closed
	02/04/19	SIMTA representative	Email sent indicating CCC understanding that the Development would have a negligible impact on the Campbelltown City LGA.	Closed
	02/04/19	CCC representative	Email sent confirming that the Development would have a negligible impact on the Campbelltown City LGA.	Closed
	03/04/19	SIMTA representative	Email sent providing feedback on CTAMP.	Closed

2. Environmental Management

This section outlines the relevant legislation, consent and approval requirements that apply to traffic management and identifies additional permits and approvals that may be required during Construction Phase B works.

2.1. Legal and Other Obligations

Table 2-1 below details the legislation, planning instruments and guidelines considered during development of this CTAMP-B.

Table 2-1 Legislation, Planning Instruments and Guidelines

Legislation and Guidelines	Description	Relevance to this CHMP
Environmental Planning and Assessment Act 1979	This Act establishes a system of environmental planning and assessment of development proposals for the State.	The Development Consent conditions and obligations are incorporated into this CTAMP-B.
Roads Act 1993	Section 87 of the Roads Act requires the consent of Roads and Maritime for the construction, erection, installation, maintenance, repair, removal or replacement of a traffic control light. Section 138 of the Roads Act establishes a requirement for a Road Occupancy Licence (ROL) for works on public roads	Roads and Maritime consent will be required prior to the installation of portable traffic lights at the site access to accommodate the construction vehicle movements and traffic generation. A ROL will be required for works on public roads associated with the Development.
Local Government Act 1993	Approval required from local government for some activities on or adjacent to public roads.	Works adjacent to public roads owned by Council will require approval.
Road Transport Act 2013	Incorporates most of the statutory provisions concerning road users, road transport and the improvement of road safety in NSW.	Drivers transporting goods to and from the Development must comply with the *Road Transport Act 2013.*
Road Rules 2014	Establish a framework for safe and efficient movement of traffic on NSW roads.	Drivers accessing the Development must comply with the Road Rules 2014.
Dangerous Goods (Road and Rail Transport) Regulation 2014	The key sections of this Regulation relevant to the Development include, but are not limited to: • Clause 67: Duty on prime contractors to transport dangerous goods in accordance with the Australian Dangerous Goods code • Part 5: Consignment procedures for dangerous goods	Transport of dangerous goods must be in accordance with the Dangerous Goods (Road and Rail Transport) Regulation 2014

Legislation and Guidelines	Description	Relevance to this CHMP
	• Part 12: Safety equipment	

Additional guidelines and standards relating to the management of traffic and access include:

- Roads and Maritime Traffic Control at Worksites Technical Manual Version 6.1, February 2022
- Roads and Maritime QA Specification G10 – Traffic Management, June 2015
- Roads and Maritime Roads Occupancy Manual, May 2015
- AS 3845:1999 Road Safety Barrier Systems
- AGTM 02-08 Guide to Traffic Management Part 2: Traffic Theory, 2015
- AGTM 06-07 Guide to Traffic Management Part 6: Intersections, Interchanges and Crossings – General, 2017
- AGRD 04-09 Guide to Road Design Part 4: Intersections and Crossings – General, 2009
- AS 1743.3-2009 Traffic control devices for works on roads
- AS 1742 Parts 1 to 14, Manual of Uniform Traffic Devices (as required)
- NSW Centre for Road Safety, NSW Speed Zoning Guidelines Version 3, 2009
- Roads and Maritime Delineation Manual, March 2008
- Roads and Maritime Supplement to Austroads Guide to Road Design
- NSW Government - The Guide to Traffic and Transport Management for Special Events
- NSW Bicycle Guidelines
- Roads and Maritime Traffic Signal Design and Specification SI/TCS/8 Installation and reconstruction of traffic light signals
- Relevant Roads and Maritime Technical Direction and Guide updates.

It is noted that Moorebank Avenue between M5 and Anzac Road is owned and maintained by Liverpool City Council. Moorebank Avenue between Anzac Road and Cambridge Avenue is a private road on Commonwealth land.

2.2. Development Consent Compliance Matrix

Development consent compliance matrices are included in Appendix A.

2.3.

2.3. Permits Approval

2.3.1. Speed Zone Authorisation

No changes to existing sign posted speed limits will be implemented during the Development works. As such, no Speed Zone Authorisation (SZA) approvals are currently proposed as part of this CTAMP.

2.3.2. Traffic Control Signal Plans

Temporary Traffic Control Signal (TCS) plans will be required to facilitate the Moorebank Avenue upgrade works as part of the Development. The TCS plans will be drawn by a suitably qualified person and endorsed by a suitably qualified practitioner. The certified copies of the TCS plans and civil design plans will be submitted to the Roads and Maritime for consideration and approval prior to the commencement of any road work.

2.4. Roles and Responsibilities

Key roles and responsibilities associated with this CTAMP are presented in Table 2-2.

Table 2-2 Roles and Responsibilities

Roles	Responsibilities
Contractor's Works package Manager (Contractor's WM)	• Providing sufficient resources to implement the requirements of this CTAMP • Direct Superintendents and site engineers to plan traffic management measures in accordance with the Development requirements and all relevant safety regulations and standards. Verify implementation. • Report to the Principal's Representative on forecast traffic movements in accordance with the Fill Importation Management Protocol (Appendix D) • Undertake Traffic Control Inspections as required.
Contractor's Construction Manager (Contractor's CM)	• Oversee the planning, development, implementation, revisions, and approvals with the relevant authorities and stakeholders (where required) of the TMPs and TCPs • Manage and maintain records of the Development's road safety audit process and direct the construction team to implement resultant corrective actions • Oversee the creation and update of site-specific TCPs for construction works for Development • Plan works to manage the importation of material to the Development site to comply with the daily importation restrictions in accordance with the Fill Importation Management Protocol (Appendix D) • Undertake Traffic Control Inspections as required.
Contractor's Environment Manager (Contractor's EM)	• Monitoring the implementation of this CTAMP, including compliance with relevant CoCs. • Facilitating awareness and giving toolbox talks to site personnel in relation to the requirements of this CTAMP and other plans relevant to traffic management including the CAQMP and the Construction Noise and Vibration Management Plan (CNVMP).

Roles	Responsibilities
Superintendents/ Supervisors/ Foremen	• Controlling general day to day site issues with respect to the movement of construction vehicles within the Development construction area • Undertake Traffic Control Inspections as required • Complying fully with applicable requirements of this CTAMP.
Contractor's Traffic Engineer	• Undertake the planning, development, implementation, revisions, and approvals with the relevant authorities and stakeholders (where required) of the TMPs and TCPs • Confirming all components of the implemented traffic control plans are relevant to the risks and hazards • Check traffic control devices shown on the traffic control plans are available for use and fit for purpose • Facilitating traffic awareness and giving toolbox talks to site personnel • Hold relevant certifications from Roads and Maritime for the Implementation of Traffic Control Plans and Prepare a Work Zone Management Plan.
All Other Personnel	• Complying fully with applicable requirements of this CTAMP • Follow instructions of Contractor's Traffic Control Personnel and Contractor's Traffic Engineer.

2.5. Training

The Construction Contractor will provide all personnel, including employees, and sub-contractors with suitable environmental induction / training to inform site personnel of their responsibilities and competent to carry out the work and meet environmental obligations. All personnel will be required to complete an induction before they are authorised to work on the Development.

As a minimum, the induction will include the following:

- Obligations to maintain access to private properties; the efficient and safe ingress and egress of vehicles from site; onsite, offsite and remote parking; minimising idling and queuing in local streets; safe pedestrian and cyclist access through or around worksites to be maintained
- Encouragement of car pooling
- Incident response procedures in the event of an unplanned traffic incident, as outlined in Section 3.2.20
- Adherence to the Fill Importation Traffic Management Protocol (Appendix D) and Driver's Code of Conduct (Appendix B).

Records of all training and induction activities are to be filed in accordance with the document control system.

Drivers of construction vehicles or plant are to be instructed in the following, by their supervisors, and during the induction process, prior to commencing on site:

- All trucks entering site must have their loads covered from the point of origin - trucks to be fitted with tight tailgates
- Vehicles operating onsite to have flashing amber lights attached to roof of cab
- Trucks removing material from site are to brush off any excess material likely to fall off the body or back on site prior to re-entering the haul road or public roads
- All trucks shall be loaded so as not to exceed the legal weight limitations in force at the time, noting weight restrictions of any bridges along designated routes
- Adhere to 20 km/hr on the Development site, unless stated otherwise
- Responsible driving practices are essential and particular care is to be taken in school zones
- Reverse alarms are to be used when reversing onsite
- No use of compression brakes by construction vehicles in the vicinity of the site
- All loading and unloading of materials and equipment is undertaken with regard to relevant safe works methods statements and any job safety analyses
- Adhere to the Driver's Code of Conduct (Appendix B)
- Adhere to the nominated construction truck and haulage routes for the importation of fill and other construction activities
- All fill importation is conducted in accordance with the Fill Importation Traffic Management Protocol (Appendix D).

Toolbox meetings will also be undertaken, as and when required.

Competency training will be provided by the Construction Contractor as required and may include a certification, vocational qualification or a competency assessment.

The Contractor's Traffic Engineer will be required to be qualified, as a minimum, in the Roads and Maritime Prepare a Work Zone Traffic Management Plan course (i.e. hold a current Prepare a Work Zone Traffic Management Plan card) and have recent experience in traffic management on road construction sites of equivalent complexity to the Development.

The Contractor's Traffic Control Personnel will be required to be qualified, as a minimum, as Roads and Maritime Traffic Controllers (i.e. hold a current Traffic Controller card).

3. Implementation

This section details the construction activities associated with Construction Phases A and B works and assesses the traffic and access impacts on intersection performance, car parking, public transport accessibility, local access and emergency vehicles.

3.1. Construction Overview

3.1.1. Construction Program

The indicative construction program is shown in Table 3-1. The construction works have been divided into seven ‘works periods’ which are inter-related and will potentially overlap with other stages of the Development. Subject to confirmation from the Construction Contractor, the order and staging of these construction works periods may change.

Table 3-1 Indicative Construction Program (revised)

Construction Works Period		2018				2019				2020				2021				2022				2023				2024				2025			
		Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4
Early Works	Pre-construction Activities																																
	Site Preparation Activities																																
Construction Phase A	Completion of Site preparation activities																																
	Bulk earthworks, drainage and utilities																																
	Construction and internal fit-out of warehousing																																
	Miscellaneous construction and finishing works																																
Construction Phase B	Bulk earthworks, drainage and utilities																																
	Construction of the Moorebank Avenue Diversion Road																																
	Pavement and intersection works along Moorebank Avenue																																

Cumulative traffic implications are further assessed in Section 3.2

3.1.2. Construction Activities

A summary of the indicative construction works, and associated activities proposed to be undertaken during Construction Phases A and B are provided in Table 3-2.

Table 3-2 Construction Activities to be undertaken during Construction Phases A and B on the Development Site

Construction Works Periods	Activity
Completion of Site preparation activities	• Demolition of existing structures • Decommissioning of redundant services on both sides of Moorebank Avenue • Clearing of vegetation • Clearing and grubbing along both sides of Moorebank Avenue • Adjusting the building formation of the site (to final operational levels) within which the Main Warehousing Compound will be located • Installation of site compounds including the Moorebank Avenue Upgrade Works compounds, Hansen Yuncken compound and Liberty compound • Establishment of temporary batch plant and materials crushing plant
Bulk earthworks, drainage and utilities	• Importation, stockpiling and placement of up to 600,000 m3 of imported clean general fill for bulk earthworks • Installation of on-site detention (OSD) and drainage infrastructure within the MPE Stage 2 site • Construction of retaining walls • Creation of internal road formation by general earthworks (by constructing fill embankments) • Bulk earthworks and adjusting the building formation of the Development site to final level, including the terminal hardstand • Utilities relocation and installation • Establishment of hardstand areas.
Construction and internal fit-out of warehousing	• Foundation and floor slab installation • Erection of framework and structural walls • Installation of roof • Internal fit-out of warehouses (racking and associated services).
Miscellaneous construction and finishing work	• Pavement construction (internal transfer roads and perimeter road), including forming of new kerbs, gutters, medians (where required) and other structures • Line marking, lighting and sign posting • Installation of road furniture, including traffic signs and pavement markers.

Construction Works Periods	Activity
	• Miscellaneous structural construction • Finishing works, including landscaping and general site rehabilitation, where required • Commissioning of the Development • Decommissioning / demobilisation of the Development site, including removal of construction compound(s) and temporary construction environmental controls.
Construction of the Moorebank Avenue diversion road	• Stripping of topsoil within footprint of temporary diversion road • Installation of temporary drainage • Placement of fill and temporary road pavement (e.g. gravel) • Construction of interface between temporary diversion road and existing Moorebank Avenue • Installation of temporary road signage, street lighting and signalling • Transfer of traffic onto temporary diversion road from Moorebank Avenue.
Bulk earthworks, drainage and utilities	• Removal of existing pavement and stripping of topsoil within Moorebank Avenue • Importation, stockpiling and placement of up to a total of 600,000 m^3 (including the volume imported during the previous phases) of imported clean general fill for bulk earthworks • Creation of a road formation by general earthworks (by constructing fill embankments) • Utilities relocation and installation
Pavement works along Moorebank Avenue	• Placement of select layer of earthworks material on top of the road formation • Placing and compacting the pavement later (concrete, or concrete and asphalt) over the select layer (consisting of a sub-base and base) and potential sealing with bitumen • Traffic switching from diversion road onto final, upgraded Moorebank Avenue • Removal of construction traffic management and progressive opening of the internal road and warehouse access roads to traffic • Removal of road surface, road signage, street lighting and signalling from temporary diversion road • Commissioning of Moorebank Avenue.

3.1.3. Moorebank Avenue Upgrade

Prior to the commencement of any Moorebank Avenue upgrade works, a temporary diversion road will be constructed on the west side of Moorebank Avenue. This temporary diversion road will be designed to accommodate vehicles up to and including a 30m long Super B-Double, with a minimum of 3.5m wide traffic lanes. Two lanes of traffic on Moorebank Avenue will be provided and available at all times during construction, unless otherwise approved by Roads and Maritime, in accordance with CoC B2(g) requirements. However, some localised closures will be required to allow for the tie-ins to Moorebank Avenue at either end and then to allow for the traffic switch onto the temporary diversion road.

The Contractor will be responsible for obtaining all relevant approvals prior to the commencement of such activities as outlined in Appendix A.

This CTAMP-B has been developed in accordance with the 85 % detailed design drawing set of the temporary diversion road (Northrop, November 2018).

3.1.4. Construction Vehicles

The size of the proposed construction vehicles expected during the Construction Phase B works include:

- 25 m long B-double, truck-and-dog and semi-trailer vehicles for larger deliveries, including to import general fill material to the Development site
- Heavy to small rigid vehicles for remaining construction activities and deliveries.

3.1.5. Construction Site Compounds and Access

The access points to the construction compounds are shown in Figure 3-1 for Construction Phase B.

Temporary construction compounds will be required to enable the storage of all construction materials and plant equipment are wholly contained within the Development site. Under no circumstances will construction materials and/or plant or equipment be stored on a public road, unless prior approval and relevant permit approvals have been obtained from relevant authorities.

Two site access points have been nominated for vehicular access to the Development site as detailed below (and depicted in Figure 3-1):

- Northern Access – a signalised intersection south of the Defence Joint Logistics Unit (DJLU) along Moorebank Avenue, in order to facilitate access to the site to the east of Moorebank Avenue (northern access point in Figure 3-1) including Moorebank Avenue upgrade construction area (these access points also serve as access for operational purposes)
- Southern Access – a signalised intersection south of Northern to facilitate access east of Moorebank Avenue into the IMEX (southern access point in Figure 3-1) and Moorebank Avenue upgrade construction area.
- Western Access – intersection of Moorebank Avenue and Anzac Road to facilitate access west of Moorebank Avenue to the Moorebank Avenue upgrade Compound A.

Table 3-3 Traffic access/egress arrangements for initial stages of Construction Phase B

Development Access/Egress	Directions
Site Entry	
Northern – Entry to MPE Site east of Moorebank Avenue	• Approach the site heading south along Moorebank Avenue from the M5 intersection on to Moorebank Avenue Diversion Road • Turn left at signalised intersection south of the Defence Joint Logistics Unit (DJLU) to enter the MPE Site • Use MPE Site internal road to access relevant construction compound within the Development site(these access points also serve as access for operational purposes)
Southern – Entry to IMEX east of Moorebank Avenue	• Approach the site heading south along Moorebank Avenue from the M5 intersection on to Moorebank Avenue Diversion Road • Turn left at signalised intersection south of the Northern entry point to enter the IMEX site • Use MPE Site internal road to access relevant construction compound within the Development site
Entry to MPE Site Compound west of Moorebank Avenue	• Approach the site heading south along Moorebank Avenue from the M5 intersection • Continue straight until the first right turn intersection • Turn right (west) at intersection with Bushmaster and Moorebank Avenue • Turn right at the first roundabout (north) off of Bushmaster Avenue into Bapaume Rd then turn right into the MPE Development site Compound
Site Exit	
Exit from MPE Site east of Moorebank Avenue	• Use internal MPE Site road network to access signalised intersection at site access point off Moorebank Avenue • Turn right (north) onto Moorebank Avenue Diversion Road • Continue to M5 motorway
Exit from MPE Site west of Moorebank Avenue	• Use construction road network to access site access point • Turn left (west) onto Bapaume Road toward ABB • Veer left (south) onto Bushmaster Avenue, enter the roundabout taking the first exit back towards Moorebank Avenue, straight to Anzac Road (light vehicles only) and left or right turn on Moorebank Avenue • Alternate if Bapaume is open, veer right (east) onto Bapaume Road towards Moorebank Avenue • Turn left (north) off Bapaume onto Moorebank Avenue (no right turn) • Continue to M5 motorway

A series of construction gates will be provided off the temporary diversion road to access the Moorebank Avenue upgrade works site and the MPE Site. These future access arrangements are not captured in detail within this iteration of the CTAMP and will require the development of Vehicle Movement Plans in advance of the works. The process for the development and implementation of Vehicle Movement Plans (VMPs) is outlined in Section 3.2.12.

All construction vehicles will enter and exit the site access in a forward direction at all times. Swept path analysis has been conducted for site access to identify suitable vehicle accessibility to and from the Development site (refer to Appendix E). The swept path analysis indicated that 36.2m long A-Double vehicles can be used at the main MPE Stage 2 site entry and exit, while a 25m long B-Double can be used at the entry and exit. Notwithstanding the following vehicle size restrictions will be implemented for the Development:

- Northern and Southern access point for both initial and later stages: 30m long Super B-Double (these access points also serve as access for operational purposes)
- Western access point for both initial and later stages: 25m long B-Double.

Swept path analyses associated with the activities outlined in CoC B13 should be provided to RMS in line with the Works Authorisation Deed (WAD) process required under CoC B14. Swept path analyses required for all other activities outside of those outlined in CoC B13 will be provided to RMS with detailed Vehicle Movement Plans (VMPs) at least 10 working days prior to the proposed activity, in accordance with Roads and Maritime QA Specification G10. All demolition and construction vehicles must be contained wholly within the site and vehicles must enter the site before stopping, in accordance with CoC B6.

All truck drivers will be advised of the nominated truck routes to / from the Development site and be required to adhere to the nominated routes (refer to Section 3.2.12). This will also be incorporated as part of the Driver’s Code of Conduct, refer to Appendix C.

Figure 3-1 Location and Access Points of Development Compounds

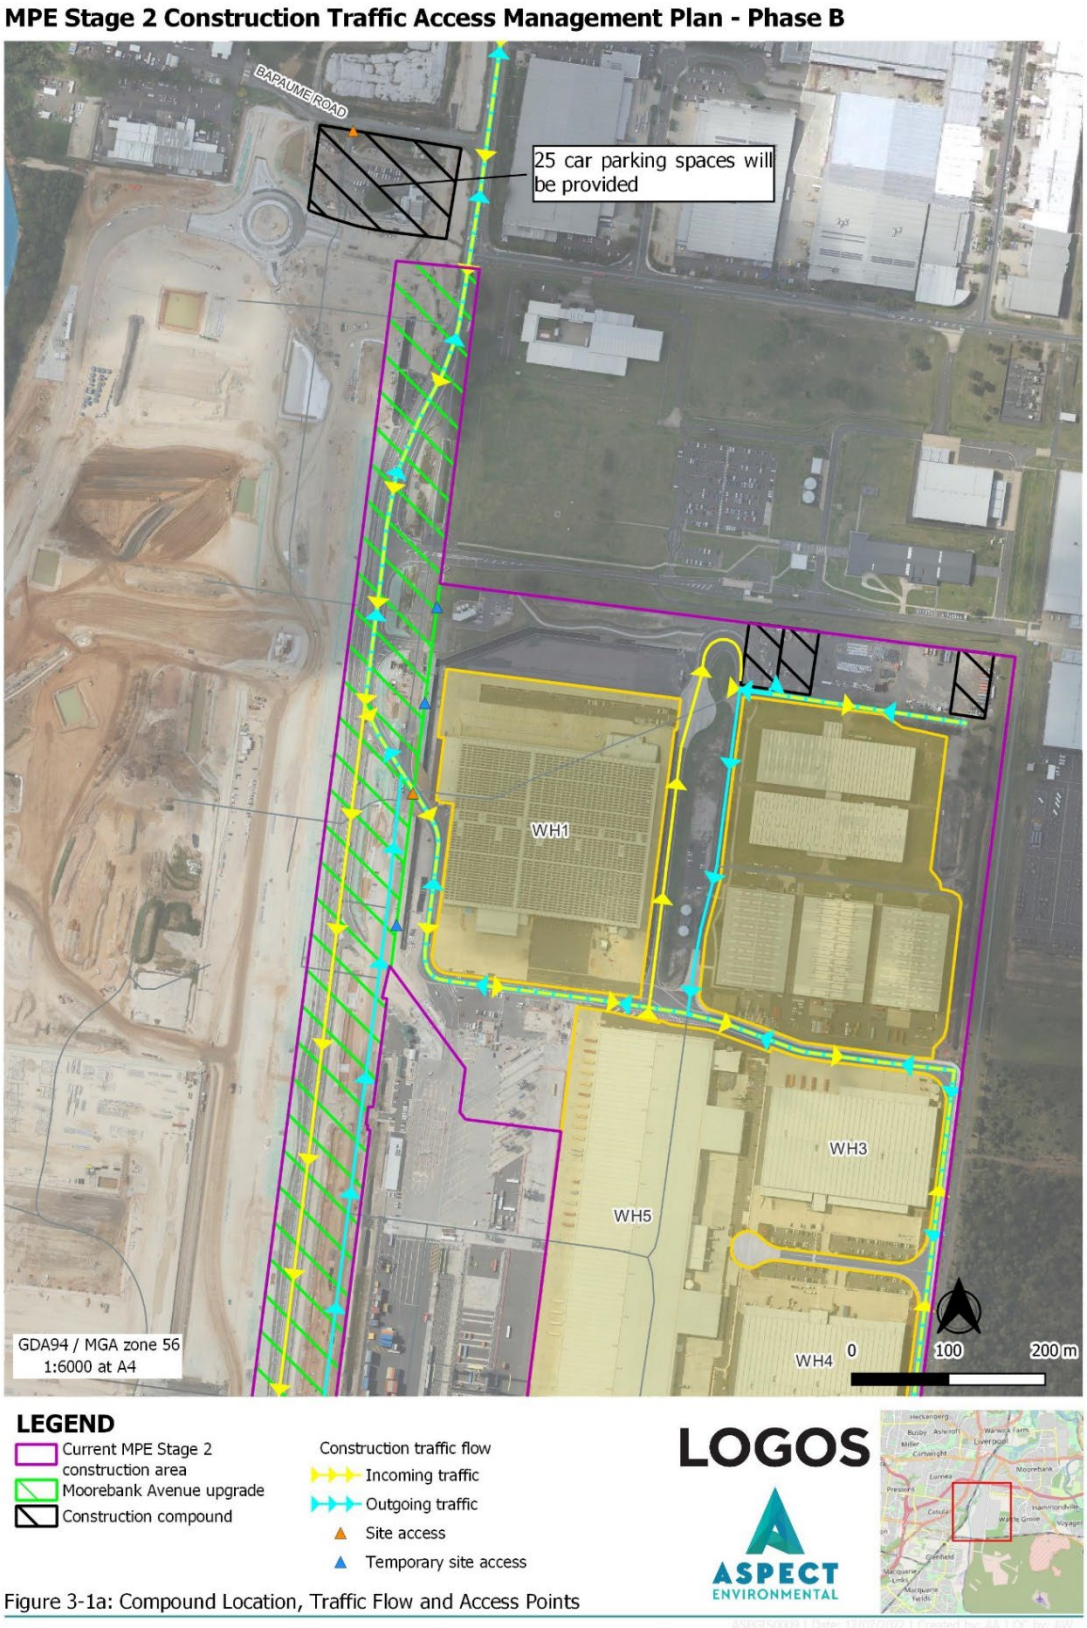

Figure 3-1a: Compound Location, Traffic Flow and Access Points

MPE Stage 2 Construction Traffic Access Management Plan - Phase B

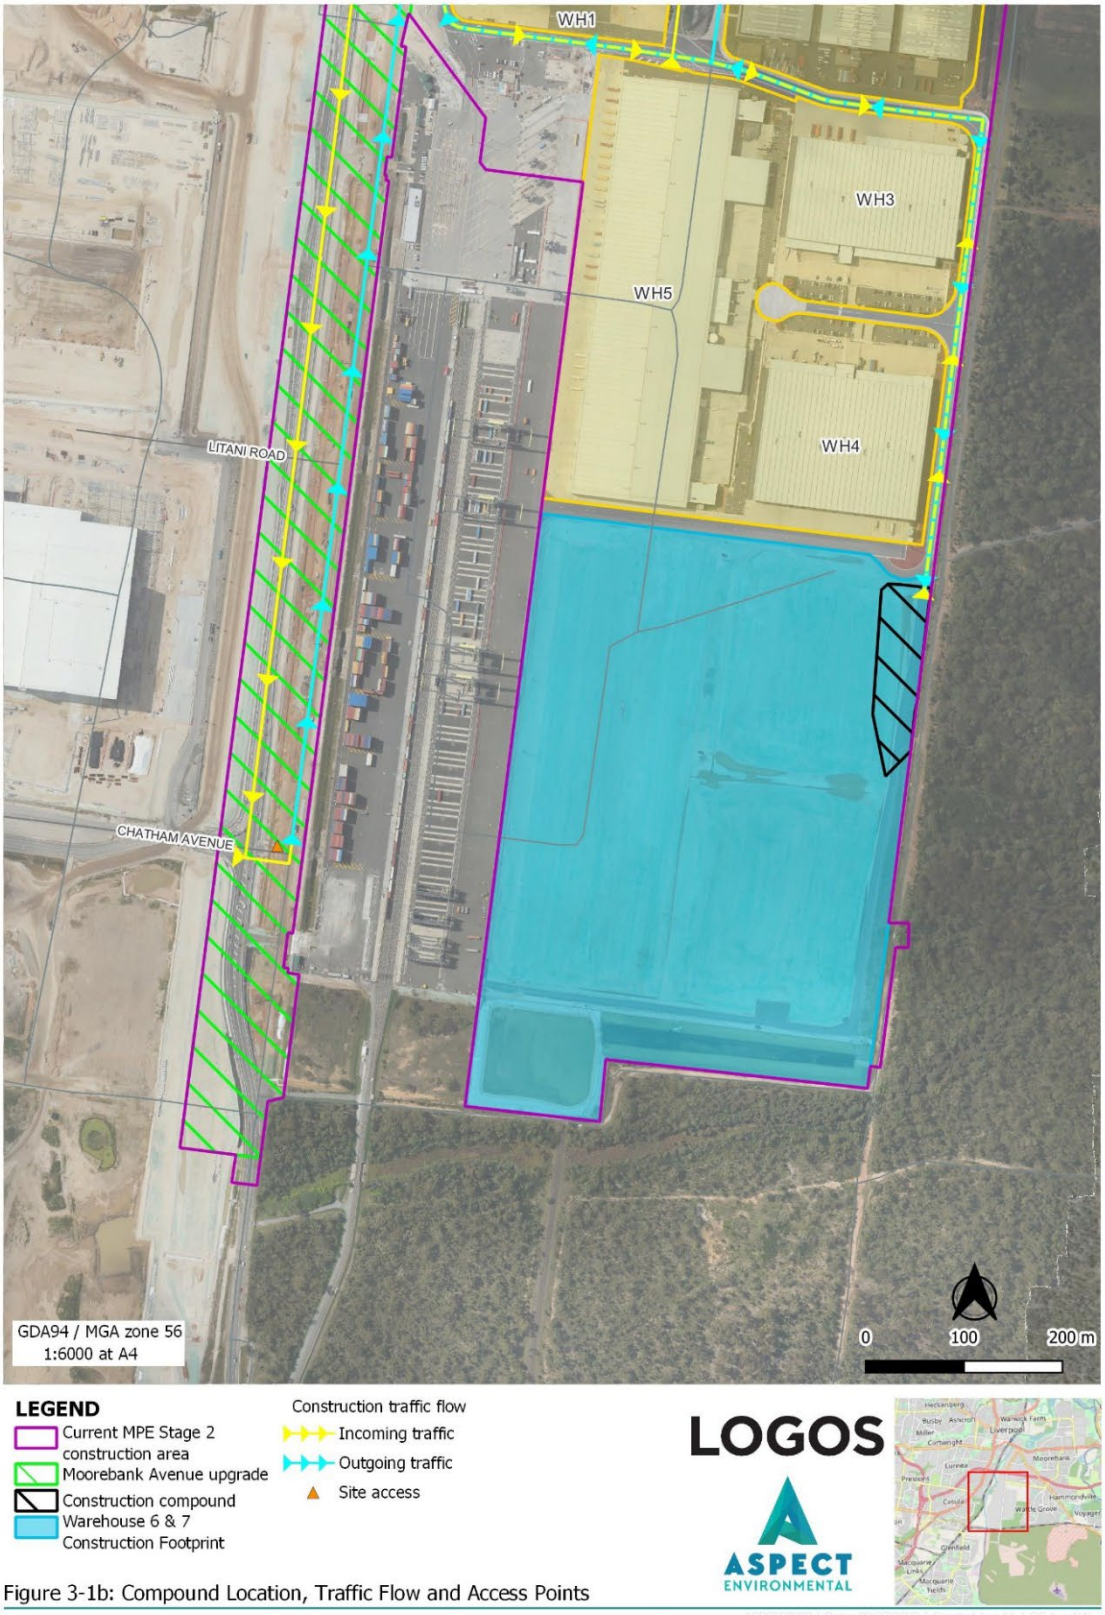

Figure 3-1b: Compound Location, Traffic Flow and Access Points

3.1.6. Fill Haulage Routes / Vehicle Movement Plan

Vehicles transporting fill to site will generally use the nominated construction truck routes, i.e. M5 Motorway and Moorebank Avenue to access the Development site, as noted above. Heavy vehicles transporting spoil and demolition material off site will exit the Development site and head north on Moorebank Avenue towards the M5 Motorway.

In the event that the nominated route was not available, vehicles will be restricted to travel via Roads and Maritime B-double routes and adhere to existing posted load limits on roads.

No heavy vehicles will use Anzac Road. The use of Glenfield Waste Facility is not currently expected. In the event that disposal of unsuitable material to Glenfield Waste Facility is required, a small number of truck movements (expected to be less than six per day) will access the facility / Development site via Cambridge Avenue.

The haulage routes will be communicated to the fill import contractors during the heavy vehicle drivers' induction. The Fill Importation Management Protocol (Appendix A) and Driver's Code of Conduct (Appendix C) will be provided to all contractors.

All construction vehicles will be required to adhere to the nominated construction routes to/from the Development site. The Vehicle Movement Plan during Construction Phase B is provided in Figure 3-2. An alternative route includes heavy vehicles travelling north along Moorebank Avenue, over the M5 Motorway up to the intersection with Newbridge Road. Vehicles would then turn right onto Newbridge Road (which becomes Milperra Road and then becomes Canterbury Road) and then turn right onto either King Georges Road or Bexley Road and then turn left onto the M5 Motorway and follow prior to following the standard nominated route. This alternative route can also be accessed by buses.

The indicative spoil source locations and access to and from site re included in Figure 3-3. Spoil material will be sourced from additional developments around the Sydney area, as required.

Figure 3-2 Vehicle Movement Plan

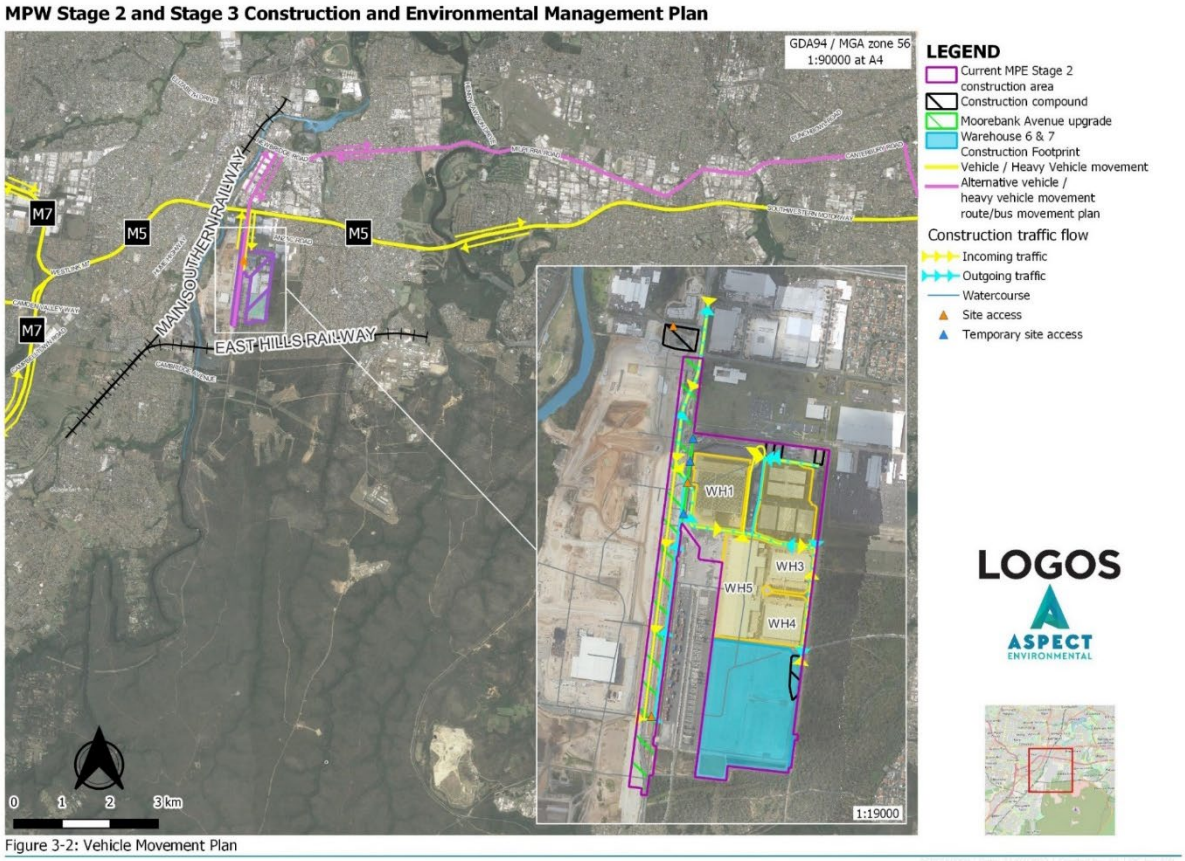

Figure 3-2: Vehicle Movement Plan

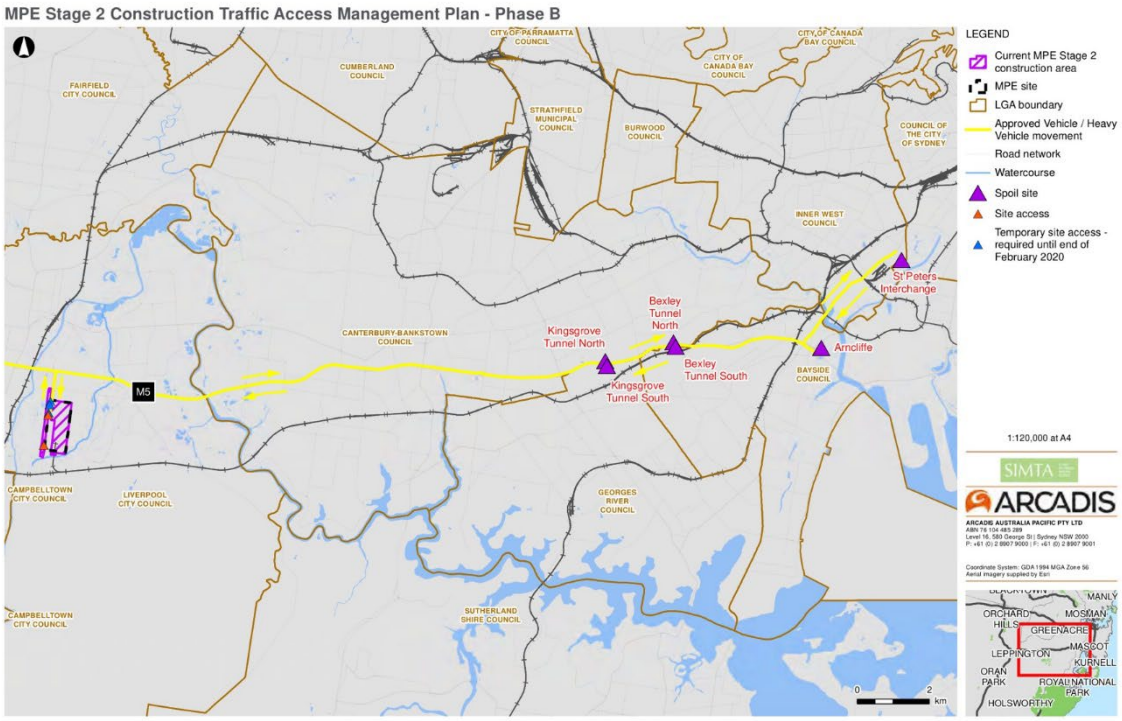
Figure 3-3 Vehicle / Heavy Vehicle Movement Plan (Indicative Spoil Sources)



3.1.7. Construction Hours

The construction hours for the Development are defined by the Development Consent. The standard construction hours are defined in CoC B65, as the following:

- Early Works and Construction:
  - 7am to 6pm, Monday – Friday
  - 7am to 1pm, Saturday
- Moorebank Avenue upgrade:
  - 7am to 6pm, Monday – Friday
  - 7am to 1pm, Saturday

Extended work hours for the Development are available through the development of an Extended Hours Work Plan. The extended work hours are defined in CoC B69, as the following:

- Early Works and Construction (not including high noise impact, piling, spoil placement, rock breaking, concrete batching)
  - 6am to 7am and 6pm to 10pm, Monday – Friday
  - 1pm to 5pm, Saturday

Out of Hours Works and Extended Hours Works will be periodically required to minimise disruption to construction or operational activities. Works outside of standard hours are available under CoC B67 in the following circumstances:

- for the delivery or dispatch of materials as requested by the NSW Police Force or other public authorities for safety reasons
- where it is required in an emergency to avoid the loss of lives, property and/or to prevent environmental harm
- where different construction hours are permitted or required under an EPL in force in respect of construction, in which case these construction hours must be complied with
- where they are undertaken in accordance with an Out-Of-Hours Work Protocol detailing the assessment, management and monitoring of noise as part of the Construction Noise and Vibration Management Plan.

In addition, works activities that may be required outside standard construction hours include:

- staging of work activities, traffic diversions and lane modifications as agreed by TfNSW for safety reasons.

3.1.8. Construction Traffic Generation

As part of the Development, construction is anticipated to generate the following peak hour vehicle numbers during the peak construction period:

- 214 light vehicles per day
- 511 heavy vehicles per day.

A total of 725 vehicles per day are expected during the peak construction period of the Development, which equates to some 1,450 vehicle movements per day (two-way movements).

Construction traffic volume estimates are based on the proposed construction schedule and the estimated volume of material to be moved during the various work periods. Construction vehicles would be accessing the site from the north only, via Moorebank Avenue.

As indicated previously, construction on the Development site will also be occurring concurrently with other works within the vicinity, including the MPE Stage 1 and MPW Early Works. As such, the 'worst-case' cumulative construction traffic volumes expected during peak construction are summarised in Table 3-4.

Table 3-4 Cumulative Construction Traffic Volumes During the Peak Construction Period

Vehicle Type	**Vehicle Movements per day**	
	MPE Stage 1	MPE Stage 2 RtS
Light Vehicles	400	428
Heavy Vehicles	400	1022
Total	**800**	**1450**

Daily traffic was assumed to evenly distributed across works periods as follows:

- MPE Stage 1: 7am - 5pm – assumed ~10% of construction trucks per hour
- MPE Stage 2: 7am - 7pm – assumed ~8% of construction trucks per hour

Table 3-4 indicates that during the 'worst-case' peak construction period, up to 2,600 vehicle movements per day could be expected. The impacts under this scenario are discussed in Section 3.2.

3.2. Construction Traffic Impacts

3.2.1. Existing Baseline Traffic Conditions

Traffic count surveys undertaken for MPE, MPW and Roads and Maritime's wider Liverpool Moorebank Arterial Road Investigations (LMARI) traffic model in 2015 were used for the CTIA. Table 3-5 shows existing peak hour traffic volumes on Moorebank Avenue, Anzac Road and Cambridge Avenue.

Table 3-5 Peak Hour Traffic Volumes on Key Roads in 2015

Locations	AM Peak (8-9am)		PM Peak (5-6pm)	
	NB/EB[1]	SB/WB	NB/EB[1]	SB/WB
Moorebank Ave, South of Anzac Rd	950	430	450	840
Anzac Rd, East of Moorebank Rd	720	490	510	520
Moorebank Ave, South of Jacquinot Road	920	360	350	920

** Note: (1) Northbound (NB), Eastbound (EB), Southbound (SB), Westbound (WB)*

As part of the MPE Stage 2 RtS, the existing baseline traffic volumes have been updated to reflect 2017 data as part of the revised cumulative traffic analysis for the MPE Site. The revised traffic intersection analysis is further detailed in Section 3.2.2.

3.2.2. Intersection Performance

Revised traffic intersection analysis using SIDRA Intersection 7.0 modelling software has been conducted to assess the cumulative impacts during the peak construction period, when activities for MPE Stage 1 and MPW Early Works will be occurring concurrently with the construction on the MPE Stage 2 works in 2018.

It should be noted that two lanes of traffic on Moorebank Avenue has been made available at all times where possible during the construction works period via the temporary diversion road. This temporary diversion road was constructed prior to the commencement of Moorebank Avenue upgrade works.

Roads and Maritime uses Level of Service (LoS) as a measure of performance for all intersection types operating under prevailing traffic conditions. The level of service ranges from LoS A to LoS F which is directly related to the average intersection delays experienced by traffic travelling through the intersection. LoS A to LoS D are considered to provide acceptable performance, with LoS A providing better performance than LoS D. LoS D is the long-term desirable level of service. LoS E and LoS F are considered to provide unsatisfactory intersection performance.

A summary of the traffic modelling findings under the ‘worst-case’ cumulative construction traffic scenario is as follows:

- The M5 Motorway-Moorebank Avenue interchange will continue to operate at an overall acceptable Level of Service (LoS) at B and C in the AM and PM, respectively. The expected changes for specific movements at this intersection are shown in Table 3-6 and Table 3-7.
- The Moorebank Avenue/ MPE Stage 2 Site Access will continue to operate at LoS A in both the AM and PM
- The Moorebank Avenue-DJLU Access will operate at LoS A in the AM and PM
- The Moorebank Avenue-Anzac Road intersection will operate at LoS C or better in the AM and PM.

The results of the AM and PM Peak SIDRA analysis are presented in Table 3-6 and Table 3-7, respectively. It is noted that the existing modelling results (i.e. without construction)

have been derived from the revised cumulative traffic modelling as part of the MPE Stage 2 RtS.

Table 3-6 AM Peak Intersection Performance Results

Intersections	Intersection Control	AM Peak			
		Existing Baseline Scenario (without construction)		Proposed Scenario (with construction)	
		Ave. Delay (s)	LoS	Ave. Delay (s)	LoS
Moorebank Avenue-MPE Stage 2 Site Access	Signal	7	LOS A	12	LOS A
Moorebank Avenue-DJLU Access	Signal	N/A^	N/A^	4	LOS A
Moorebank Avenue-Anzac Road	Signal	18	LOS B	39	LOS C
M5 Motorway-Moorebank Avenue	Signal	24	LOS B	34	LOS C

Table 3-7 PM Peak Intersection Performance Results

Intersections	Intersection Control	AM Peak			
		Existing Baseline Scenario (without construction)		Proposed Scenario (with construction)	
		Ave. Delay (s)	LoS	Ave. Delay (s)	LoS
Moorebank Avenue-MPE Stage 2 Site Access	Signal	6	LOS A	10	LOS A
Moorebank Avenue-DJLU Access	Signal	N/A^	N/A^	5	LOS A
Moorebank Avenue-Anzac Road	Signal	17	LOS B	44	LOS D
M5 Motorway-Moorebank Avenue	Signal	30	LOS C	39	LOS C

Note:

* Assessed against the peak construction period, including MPE Stage 1, MPE Stage 2 (subject of this CTAMP) and MPW Early Works.

^The existing conditions of the Moorebank Avenue / MPE Stage 2 Site Access intersection have not been modelled as the intersection is not currently operational.

The above traffic modelling results indicate that the surrounding key intersections along Moorebank Avenue shall continue to operate at an acceptable LoS.

As shown in Figure 3-3, heavy vehicles will be turning left and right to the M5 Motorway from Moorebank Avenue and turning right and left into Moorebank Avenue from the M5 Motorway. Roads and Maritime have requested (refer to Appendix A) that the results of the AM and PM Peak SIDRA analysis for specific movements be included in this CTAMP-B. Those results, derived from the MPE Stage 2 RtS, are presented in Table 3-8 and Table 3-9.

Table 3-8 AM Peak Intersection Performance Results – M5 Motorway / Moorebank Avenue

Intersections	**Intersection Control**	**AM Peak**			
		Existing Baseline Scenario (without construction)		**Proposed Scenario (with construction)**	
		Ave. Delay (s)	**LoS**	**Ave. Delay (s)**	**LoS**
Moorebank Avenue-MPE Stage 2 Site Access	Left	9	A	11	A
	Through	34	C	48	D
	Right	44	D	45	D
Moorebank Avenue-DJLU Access	Left	8	A	9	A
	Through	43	D	47	D

	Through	9	A	11	A
	Right	34	C	48	D

Table 3-9 PM Peak Intersection Performance Results – M5 Motorway / Moorebank Avenue

Intersections	Intersection Control	PM Peak			
		Existing Baseline Scenario (without construction)		Proposed Scenario (with construction)	
		Ave. Delay (s)	LoS	Ave. Delay (s)	LoS
South – Moorebank Avenue	Left	17	B	28	B
	Through	38	C	55	D
	Right	42	C	30	C
East – M5 Motorway Off Ramp	Left	8	A	11	A
	Right	44	D	72	F
North – Moorebank Avenue	Left	7	A	7	A
	Through	21	B	66	E
	Right	45	D	45	D
West – M5 Motorway Off Ramp	Left	6	A	6	A
	Right	44	D	50	D

3.2.3. Construction Worker Parking

A number of the Development's staff and labour force are expected to drive to the site and will require car parking. It is anticipated that approximately 214 light vehicles will access the site per day.

A total of 150 parking spaces for construction workers will be made available within the site during the course of the works (refer to Figure 3-1). Of this, 25 car parking spaces will be located in the Moorebank Avenue upgrade works compound for construction staff and labour force working exclusively in the Moorebank Avenue upgrade works construction area. However, all workers will be generally encouraged to use public transport and/or carpool to travel to/from the site. This will be incorporated into the site induction program.

3.2.4. Public Transport Accessibility

Prior to construction of the Moorebank Avenue diversion road, the Development will not impact on existing public transport services i.e. bus services. However, during construction of the Moorebank Avenue diversion road, bus services in the area (bus routes 901 and 902) will be affected. Consultation has been undertaken with Transport for NSW to confirm adequate management of impacts to these bus routes.

3.2.5. Pedestrian and Cycle Access

Following the Roads and Maritime Health and Safety in Design (HSID) Risk Assessment Workshop conducted in April 2018 pedestrian access along the Moorebank Avenue diversion road has been removed. Detailed Pedestrian Movement Plans (PMPs) associated with the activities outlined in CoC B13 must be provided to TfNSW in line with the Works Authorisation Deed (WAD) process required under CoC B14. PMPs required for all other activities outside of those outlined in CoC B13 are required to be prepared and submitted with the TCPs, at least 10 working days prior to the proposed activity, in accordance with Roads and Maritime QA Specification G10.

The alternative pedestrian and cyclist pathways will require adjustment at various stages throughout construction of the diversion road and during its operation, and as such an updated PMP will be prepared as required.

3.2.6. Adjoining Properties and Local Access

All construction access / egress points will be maintained during Construction Phase B works as per existing conditions, with mitigation measures implemented, if necessary. Regular consultation with all affected local properties will be conducted to minimise any disruption to existing access arrangements. Consultation will be undertaken in accordance with the Community Communication Strategy (CCS). The types of consultation employed by the Development will depend on the proposed disruption and expected impacts. Consultation may include:

- Signage
- Door knocking relevant property owners and/or businesses
- Phone calls
- Specific community notifications / letter box drops
- Community updates / newsletters.

3.2.7. Emergency Vehicles and Heavy Vehicles

No special provisions for emergency service vehicles or heavy vehicles are required as part of Construction Phase B works. Emergency service vehicle and heavy vehicle access will be maintained throughout construction (Phases A and B).

3.2.8. Cumulative Impacts

The traffic modelling results indicate that under the cumulative construction scenario the surrounding key intersections along Moorebank Avenue will continue to operate at an acceptable LoS during the AM and PM peaks during peak construction. The traffic modelling findings under the ‘worst-case’ cumulative construction traffic scenario is as follows:

- The M5 Motorway-Moorebank Avenue interchange will continue to operate at an overall acceptable LoS at B and C in the AM and PM respectively.
- The Moorebank Avenue/ MPE Stage 2 Site Access will continue to operate at LoS A in both the AM and PM
- The Moorebank Avenue-DJLU Access will operate at LoS A in the AM and PM
- The Moorebank Avenue-Anzac Road intersection will operate at LoS C or D (worst case) in the AM and PM respectively.

Management measures (see Section 3.2.21) will be implemented during construction to minimise traffic impacts. Appropriate implementation of these controls will reduce the risk of traffic impacts during the construction phase of the Development.

3.2.9. Construction Traffic Management Measures

The effective management of construction traffic to and from the construction work sites is critical for the efficient delivery of the Development and to minimise impacts to road users and the surrounding community. This section describes the overall approach to managing and mitigating traffic and transport risks during construction of the Development.

The following sub-sections include several plans that require submission to RMS for approval prior to works commencing. Where possible, when multiple traffic plans (e.g. TCP, VMP, etc.) are required to be submitted to RMS for review, these plans should be packaged together and submitted to TfNSW or TMC (as applicable) as early as possible to avoid delays to the construction program.

Note that plans associated with the activities outlined in CoC B13 must be provided to RMS in line with the Works Authorisation Deed (WAD) process required under CoC B14. Plans required for all other activities outside of those outlined in CoC B13 must be provided to TfNSW in line with the requirements of Roads and Maritime QA Specification G10. Note that consideration of these documents by TfNSW may extend beyond the standard minimum timeframe that is specified in Roads and Maritime QA Specification G10.

3.2.10. Traffic Control Plan

As part of the works, Traffic Control Plans (TCPs) will be prepared to manage all construction vehicle activity at construction site access points in advance of the works. TCPs associated with the activities outlined in CoC B13 must be provided to RMS in line with the WAD process required under CoC B14. TCPs required for all other activities outside of those outlined in CoC B13 will be submitted with ROL applications at least 10 working days prior to the proposed work the ROL is pertaining to.

TCPs will be designed in accordance with *AS 1742.3 Manual of uniform traffic control devices – Traffic control devices for works on roads and Roads and Maritime Traffic Control at Worksites Manual*. Signs will be installed and maintained throughout the construction period, unless otherwise specified.

TCPs will be prepared to:

- Alert drivers about changes to normal road conditions
- Inform drivers of changed road conditions
- Direct drivers around the site

- Provide a safe environment for construction workers, motorists, cyclists and pedestrians.

Future TCPs will be identified and developed progressively during construction as the works progress. These progressive TCPs will be managed separately to this CTAMP and developed by a suitably qualified professional and provided to the Environmental Representative (ER) for information prior to the commencement of works applicable to that TCP.

3.2.11. Traffic Control Devices

Traffic Control Devices (TCD) are all signs, traffic signals (permanent and temporary), road markings, pavement markers, traffic islands, and/or other devices placed or erected to regulate, inform, warn and/or guide road users. All sign posting installed for the Development will comply with the requirements outlined in the Road and Maritime's Traffic Control at Worksites Manual (TCAWs), Road and Maritime's Delineation Manual, AUSTROADS Guide to Traffic Engineering Practice, Part 8 – Traffic Control Devices and the relevant parts of Australian Standard 1742.

Approval from TfNSW to the proposed portable traffic signals will be obtained prior to the commencement of the works to install any portable traffic signals.

3.2.12. Vehicle Movements

All Development related heavy vehicles are required to approach the site from the north, either via the M5 Motorway or via the alternate route as detailed in Section 3.1.6, Figure 3-2 and Figure 3-3. All vehicles are to enter and exit the site in a forward direction only at the site access points identified on Figure 3-1. Access to the MPE Site, east of Moorebank Avenue is managed via a signalised intersection or turning lane. Access to the western side of Moorebank Avenue is via a turning lane at Bushmaster Avenue to the north of the site.

Vehicle Movement Plans (VMPs) associated with the activities outlined in CoC B13 must be provided to RMS in line with the WAD process required under CoC B14. VMPs required for all other activities outside of those outlined in CoC B13 are required to be prepared and submitted with the TCPs, at least 10 working days prior to the proposed activity, in accordance with Roads and Maritime QA Specification G10. These VMPs will be supported by swept path analyses that will confirm vehicles are able to enter and exit the site in a forward direction for all stages of construction.

If there are any materials spilt onto the road, site personnel and equipment shall rectify the issue accordingly, subject to appropriate OH&S provision.

3.2.13. Driver's Code of Conduct

All drivers employed on the Development, whether direct employees or not, have a responsibility to drive safely, comply with State Road regulations and the Australian Road Rules and any other directives issued by the Principal's Representative. Before any deliveries are undertaken all heavy vehicle drivers will be required to read and endorse the Driver's Code of Conduct. Copies of the Driver's Code of Conduct will be issued to relevant transport companies in advance and copies signed by drivers will be required to be provided on arrival to site.

To reinforce these obligations are Driver's Code of Conduct has been prepared and is included in Appendix C.

3.2.14. Traffic Impact Reduction Strategy

A range of measures will be applied to encourage carpooling to/from the site, including:

- Provision of car parking spaces within the site, with car parking spaces allocated to employees, with preference given to those carpooling
- Carpooling will be strongly encouraged
- The Development's induction will reinforce themes regarding parking allotments, car-pooling and courteous and professional behaviour when leaving and accessing the site.

3.2.15. Traffic Incident Management

The *Roads and Maritime Incident Response Plan Manual* provides guidelines for procedures and responses to emergency incidents. Details of incidents within an ROL area would be recorded and submitted to the Roads and Maritime Traffic Operations Manager within seven days of the incident. The incident report will include:

- Details of its location
- Contributing factors related to the ROL
- Actions taken with the ROL conditions.

Incident Management Plans for worksites are to be developed within the site specific TMPs. An ROL database would be maintained to record all incidents and road crashes.

To facilitate effective incident management, the Development would allow for the provision of incident response resources to respond to and mitigate the impact of incidents that may occur along the construction zones adjacent to traffic.

Where construction sites limit roadways to a single lane, a tow truck would be positioned on-site for the duration of the construction stage.

3.2.16. Managing Construction Worker Parking

To manage construction worker car parking, it is proposed to implement the following measures to encourage workers to use public transport and/or carpool:

- Provide an on-site tool drop-off and storage facility to allow tradespeople to drop off and store their tools/specific machinery for the Development
- Inform staff during the induction and regular management meetings where on-site car parking is located and that there is limited on-street vehicle parking surrounding the site
- Instruct staff to use public transport and/or carpool to access the site during the induction and regular management meetings
- Display public transport timetable information and details of the TfNSW NSW Trip Planner website at key locations within the work site and to enable easy access by staff.

3.2.17. Dilapidation Survey and Repairs

A Pre-construction Road Dilapidation Report for affected roads was undertaken prior to the Commencement of Construction Phase-A.

The Pre-construction Road Dilapidation Report was submitted to the Certifying Authority and a copy forwarded to Campbelltown City Council, Liverpool City Council, Roads and Maritime and the Secretary of the Department of Planning and Environment.

Affected local roads will be regularly inspected for damage during construction. Following completion of construction, a Post-Construction Road Dilapidation Report will be prepared to assess potential damage that may have resulted from the construction. The Post-Construction Road Dilapidation report will take into consideration the findings of the Pre-Construction Dilapidation Report.

Restoration and repair of roads affected by Construction Phase B works will be undertaken in a timely matter in accordance with Council and Roads and Maritime requirements at the expense of the Construction Contractor.

The defects shall be categorised as low to high risk, with high-risk defects actioned within 24 hours. The defect rating classification is described in Table 3-10.

Table 3-10 Defect Rating and Response Timing

Defect Rating	Description	Response Time
High	Defect may cause serious injury or large-scale property damage	Within 24 hours
Medium	Noticeable cracks/defects which can be readily filled/rectified. Defect is unlikely to cause injury/property damage.	Within 2 weeks
Low	Fine and hairline cracks/defects which do not need repair.	No works required. Typical wear and tear

The protocol for dilapidation surveys and repairs is provided in Appendix D.

3.2.18. Training

Site inductions, including site layout and emergency procedures, will be carried out as soon as new workers and visitors arrive onsite. All construction workers and visitors to the site will be made aware of construction traffic hazards during site inductions. The induction will include, but not limited to the following:

- Overview of the requirements of this CTAMP
- Relevant legislation
- Access for emergency vehicles
- Personal Protective Equipment (PPE) requirements
- Development's contact details
- Incident management and notification
- Safety policy
- Designated Parking Areas
- Speed Limits
- Permitted access routes
- Performance standards: environmental, OH&S, driver protocols and emergency procedures

- Community Protocol
- Timetabled public transport
- Carpooling information
- Driver's Code of Conduct.

In addition to the above general induction, all visitors will be required to undergo a visitor's induction to identify site requirements and assist with adherence to these requirements. All visitors will be accompanied around the site (construction area) by inducted personnel at all times.

Only trained and accredited traffic control personnel will be used for traffic control works on public roads. Traffic controllers must have undergone appropriate training and be certified as competent prior to their assignment to undertake traffic management at construction work sites. The minimum requirement is to have satisfactorily completed the TfNSW training package – Traffic Control Using a STOP/SLOW bat.

3.2.19. Liaison with Stakeholders

CoC B2 requires that this CTAMP-B be prepared in consultation with Liverpool City Council, TfNSW. Consultation with these stakeholders, and Campbelltown City Council, has occurred during the preparation of this plan as detailed in Section 1.8 and Appendix B.

CoC B2 also requires that this CTAMP-B include information about notifying the local community regarding development-related traffic impacts. Section 3.2.21 indicates that communication / notification may include:

- Community notifications at least 7 days prior to changes to traffic conditions that may impact on the community or stakeholders
- Provision of Development signage at least 7 days prior to any changes that impact on pedestrian routes, cycle ways, traffic conditions or access to public transport.
- Provision of variable message signs (VMS) on Moorebank Avenue advising motorists of construction traffic access routes during peak times of construction traffic.

In accordance with the Community Communication Strategy (CCS), a Community Liaison Manager (CLM) will be appointed to manage all community queries and/or issues relating to the Development for actioning, as necessary.

As per the CCS, regular updates will be posted on the Development website, newsletters, letter box drops or other approved means. In addition to this, written notification will be provided to agencies, local schools and the local community prior to commencement of any activities associated with Construction Phase B. Development updates and notifications will include potential traffic and access related impacts, as required.

The following key stakeholders have been identified for future Development updates and notifications regarding traffic associated with Construction Phase B:

- Transport for NSW
- NSW Police Force and other emergency authorities
- Sydney Transit Authority (Sydney Buses)
- Liverpool City Council

- Campbelltown City Council
- Residents
- Landowners.

The DM Communication will be responsible to manage all community queries, including to notify all relevant stakeholders as per the CCS. The format of notification will be in accordance with the CCS, which forms a sub-plan to the CEMP, and may include such measures as letter box drops. The CCS also includes processes for receiving and responding to enquiries and complaints.

The following communication tools will be available throughout Construction:

- Development Email: moorebank@tsamgt.com
- 24 Hour Development information line: 1800 986 465
- Postal address: c/- TSA Management Level 15, 207 Kent Street, Sydney NSW 2000
- Development website: moorebankintermodalprecinct.com.au

3.2.20. Incident Response Management Plan

An Incident Response Plan will be developed by the Construction Contractor and will be consistent with ESR's Incident Reporting and Management procedure. The Plan will include all operating procedures for management emergencies and unplanned incident during construction. In addition, the Incident Response Plan will include strategies and measures to respond to any emergency repair requirement or maintenance issues during Construction Phase B.

The Incident Response Plan will identify and define the roles and responsibilities of the relevant Development personnel and outline the communication protocols and systems during an emergency and unplanned incident. Formal arrangements will be in place for the review and maintenance of the Incident Response Management Plan.

3.2.21. Management Measures

The management measures in Table 3-11 are based on the final compilation of mitigation measures, provided as part of the Response to Submissions report, and the Minister's CoCs, as well as the requirements and standards of ESR, and the Construction Contractor.

Table 3-11 Management Measures

ID	Management Measure	Timing	Responsibility	Reference
Notification and permits				
TA – 01	Inform local residents of construction activities and road network changes in line with the Community Communication Strategy (CCS). Notification will include: • Community notifications at least 7 days prior to changes to traffic conditions that may impact on the community or stakeholders • Development signage installed at least 7 days prior to any changes that impact on pedestrian routes, cycle ways, traffic conditions or access to public transport. • VMS signage on Moorebank Avenue advising motorists of construction traffic access routes during peak times of construction traffic	Prior to commencement of construction	Community Engagement Consultant DM Communication	FCMM 1A MPW CoA 5 (b)
TA – 02	As required distribution of day warning notices to advise local road users of construction activities and traffic movement changes	Construction	DM Communication	FCMM 1A
TA – 03	The Construction Contractor must obtain approval from relevant Authorities for all road, footpath and shared path occupancies, detours and closures.	Prior to commencement of construction	Contractor's CM Contractor's Traffic Engineer	CoC B2

ID	Management Measure	Timing	Responsibility	Reference
TA – 04	Immediately advise the Principal's Representative of any accident or incident that involves serious injury, hospitalisation or a fatality	Construction	Contractor's WM Site Supervisor	CoC B2(g) CoC B2(h)
Dilapidating reports and repairs				
TA – 05	Prior to commencement of construction a pre-construction dilapidation report will be prepared by a suitably qualified person.	Prior to commencement of construction. Note – completed prior CTAMP-A	Contractor's WM	CoC B2(a)
TA – 06	Repair any damage caused by the contractors' activities, to any road, footpath, shared path or cycleway which is open to the public, and restore the road, footpath, shared path or cycleway to a condition at least equivalent to the condition it was in immediately prior to the occurrence of the damage as soon as practicable.	On identification of damage	Contractor's WM	CoC B2(c) CoC B2(d)
Access and Egress				
TA – 07	Installation of warning signs on approach to and at construction site access and egress	Prior to commencement of construction	Contractor's Traffic Engineer / Contractor's Traffic Personnel	CoC B2(g) FCMM 1A
TA – 08	In consultation with TfNSW, Liverpool City Council and Campbelltown City Council, general signposting of the access	Construction	Contractor's Traffic Engineer	CoC B2(b)

ID	Management Measure	Timing	Responsibility	Reference
	roads will be undertaken with appropriate heavy vehicle and construction warning signs		Contractor's WM	CoC B2(g)
TA – 09	The access and egress driveways, as well as public footpaths surrounding the site will be regularly inspected for mud and silt with appropriate actions taken to remove/ control the contamination and keep these areas in a serviceable condition.	Construction	Site Supervisors Contractor's EM	CoC B8
TA – 10	Appropriate directional signage and traffic control will be used to assist vehicles enter and exit the site with minimal disturbance to other road users and advice of any changes in road conditions. Signage may include: • PREPARE TO STOP • STOP HERE ON RED SIGNAL • LEFT TURN ON RED PERMITTED AFTER STOPPING	Construction	Contractor's Traffic Engineer	CoC B2(g) FCMM 1A
TA – 11	Any oversize vehicle trips to the site will be undertaken in accordance with the Heavy Vehicle National Law and the Roads and Maritime OSOM Vehicle and Load rules. This may include route restrictions, maximum dimension/mass limits, specified operating conditions and the requirement for an access permit.	Construction	Contractor's Traffic Engineer Contractor's CM	CoC B2(g)

Road Safet Audit				
TA – 28	A Road Safety Audit will be undertaken prior to commencement of Early Works.	Completed prior to the works. No corrective actions were identified.	Contractor's Traffic Engineer	CoC B9 FCMM 1B
TA – 28a	An updated Road Safety Audit will be undertaken as part of the 85% Detailed Design under the Roads and Maritime WAD process.	Construction	Contractor's Traffic Engineer	CoC B9 FCMM 1B
Access to property				

ID	Management Measure	Timing	Responsibility	Reference
TA – 29	Access to all properties affected by the carrying out of construction will be maintained, where feasible and reasonable, unless otherwise agreed by the relevant property owner or occupier. Any access physically affected by construction will be reinstated to at least an equivalent standard, unless agreed with by the property owner.	Construction	Contractor's CM	MPW C'th CoA 5 (b)
Traffic incident response				
TA – 30	In the event of a site safety incident relating to traffic, the following procedures will be implemented: • Stop vehicle/personnel involved in the incident immediately (or as appropriate). Operate warning lights and warn other drivers to slow down • Immediately begin warning other road users in the safest means possible • Use an appropriate TCP and use traffic controllers and signage where necessary • If a queue will be generated by the emergency incident, provide warning signs to inform road users and minimise the potential for end of queue collisions	Construction	Heavy vehicle operators Contractor's Traffic Engineer Contractor's Traffic Control Personnel Contractor's CM	CoC B2(g)
TA – 31	In the event of spillage, clear the spill whilst implementing appropriate safety actions as relevant to the event. Traffic will be directed around the incident.	Construction	Contractor's Traffic Control Personnel Contractor's CM Contractor's EM	CoC B2(g)

ID	Management Measure	Timing	Responsibility	Reference
TA – 32	In the event of inclement weather such as flooding, traffic control personnel may be utilised to manage traffic flows around the flooding. Emergency road diversions will be in place if necessary, in consultation with Liverpool City Council and NSW Police.	Construction	Contractor's Traffic Engineer Contractor's Traffic Control Personnel	CoC B2(d) CoC B2(g)
TA – 33	The process for maintenance and emergency repairs is: • Once damage that presents a safety risk is identified, the Site Supervisor and Contractor's WM will be notified • Site Supervisor will implement traffic control and safety measures to reduce the safety risk to the public • The Contractor's WM will notify Roads and Maritime and LCC of the safety issue • In consultation with TfNSW and LCC, an appropriate repair plan will be agreed and implemented as soon as practicable	Construction	Contractor's WM Contractor's Traffic Control Personnel Site Supervisor	CoC B2(g) (v)
TA – 34	An emergency response plan must be developed by the Contractor for the upgrade of Moorebank Avenue to enable emergency vehicles using Moorebank Avenue to access adjoining properties during construction.	Construction	Contractor's WM Contractor's Traffic Engineer Contractor's Traffic Control Personnel	MPW REMM 4N MPW EPBC CoA 5 a)
Unpredicted impacts				
TA – 35	Construction vehicle movements, traffic controls and network conditions will be monitored, and additional management measures will be developed and implemented in response to previously unpredicted impacts. Where necessary additional	Construction	Contractor's Traffic Engineer Contractor's Traffic Control Personnel	CoC C7(e)

ID	Management Measure	Timing	Responsibility	Reference
	measures will be developed in consultation with Liverpool City Council and TfNSW.			
TA – 36	If any unpredicted traffic and/or access related impacts and their consequences are identified, the following procedure will be implemented: • Stop work / vehicle / personnel involved immediately (or as appropriate) • Isolate the work area / vehicle if practical • Notify appropriate Development personnel (e.g. Contractor's Construction Manager, Contractor's Traffic Engineer) • Assess situation and implement remedial measures as required • Works to re-commence when impact is managed If necessary, update any processes / procedures / management measures associated with this Plan to consider unpredicted impacts.	Construction	All personnel to stop works Contractor's Traffic Engineer Contractor's CM	CoC C7(e)

4. Monitoring and Review

4.1. Environmental Monitoring

Monitoring under this CTAMP will be undertaken by the Contractor's Traffic Engineer during weekly inspections of construction activities to monitor conformance with the requirements of the CoCs and this CTAMP-B. Weekly inspection will focus on the following key issues:

- Safe movement of traffic
- Signage and barriers are clearly visible
- Construction roads support safe working and driving
- Safety of persons and property in and around the worksite.

Weekly inspections will be undertaken throughout Early Works and will be replaced by inspections identified in the Construction Traffic and Access Management Plan, once that plan is approved and implemented.

A Traffic Management Inspection Checklist will be used to maintain conformance and effectiveness of controls. Items that require action will be documented during environmental inspection and notified to the Site Supervisor. The Contractor's WM will be responsible for providing appropriate resources in terms of labour, plant and equipment to enable the items to be rectified in the nominated timeframes.

Traffic will be monitored on the road networks including traffic entering and departing the Construction Site and at key areas impacted by the Works. The Construction Contractor will appoint a traffic coordinator to monitor the networks.

The Traffic Manager will continuously monitor all traffic-related issues on Local Roads. These issues will be communicated to TMC and Local Councils on a regular basis. All incidents will be managed through an Incident Response Plan.

4.2. Site Inspections and Record Keeping

The construction works will be monitored to confirm that it occurs as set out in the CTAMP. A daily inspection before the start of construction activity shall take place to confirm that conditions accord with those stipulated in the plan and that there are no potential hazards. Any possible adverse impacts shall be recorded and dealt with as they arise.

In addition to this, the Contractor's Traffic Manager will develop a system and calendar for inspections of the infrastructure, assets and road facilities. These may be planned formal inspections or random periodic inspections. The following details will be recorded:

- Infrastructure, assets facilities, amenities
- Nature and extent of any defects present
- Location of any defects
- Recommended report and maintenance activity
- Timing for any required repair or maintenance activity.

4.3. Non-compliances, Non-conformances and Actions

It is the responsibility of all personnel to report non-compliance and non-conformances to their supervisor and/or the Contractor's EM.

Non-conformances, non-compliance and corrective and preventative actions will be managed in accordance with Section 4.4 of the CEMP.

It is the responsibility of the Contractor's CM to immediately initiate corrective actions if required and practical and safe to do so. The non-conformance or non-compliance and corrective action must include details of the action proposed, an appropriate close out date, inclusive of verification that delegated close out actions have been successfully implemented. The system notification report should be signed, dated and filed.

If the corrective and preventative action leads to further non-conformance, any further action will be subject to approval by the Contractor's CM in consultation with the Contractor's EM and the Health and Safety Manager.

4.4. Inspection of Traffic Controls

Temporary traffic controls will be regularly inspected by the Contractor's Traffic Engineer, to assess compliance and conformance with the conditions detailed in site or area TMP, TCP, ROL, SZA and to identify potential safety hazards to enable implementation of corrective solutions.

Daily inspections and maintenance of controls will be undertaken by the Site Supervisors and maintenance will be recorded in site diaries during active site works. The Site Supervisor will check required TMP, TCP, ROL and SZA are approved and on site prior to commencement of works each day.

4.5. Environmental Auditing and Reporting

Auditing and reporting will be undertaken in accordance with the CEMP.

The contractors will notify the Principal's Representative of any incident which has a negative impact on the regular flow of traffic on the road network near the Development. This includes incident categories such as:

- Motor vehicle accidents (a report will follow within two days, unless otherwise agreed)
- Breaches of any ROL conditions of approval (as part of this CTAMP, it is envisaged that no ROL will be required)
- Impacts to the regular operation of public vehicles, cyclists or pedestrians from construction traffic management.

Safety incidents will be reported immediately to the Principal's Representative. The Contractor's Traffic Engineer will provide a schedule and status of current and future ROLs on a monthly basis. The forecast schedule will contain full details on locations and timing of all proposed road occupancies for the forthcoming month.

The Contractor's CM will provide a schedule to Principal's Representative on the estimated fill requirements and truck numbers for the coming fortnight, in accordance with the Fill Importation Management Protocol. The Principal's Representative will approve or revise the trucks and fill, in consultation with the Contractor's CM.

4.6. Review and Improvement

Review (both annually and intermittently) and improvement of this CTAMP will be undertaken in accordance with CoCs and Section 4 of the CEMP.

All site personnel, including sub-contractors can contribute and provide suggestions to the Construction Contractor's Management Team if they identify any recurring or systematic issues that require preventative action to be taken as outlined in Section 4.4.1 of the CEMP.

Continuous improvement will be achieved by the ongoing evaluation of environmental management performance and effectiveness of this CTAMP-B against environmental policies and the objectives, and targets identified in Section 1.8 of this CTAMP-B. Initiatives that improve performance and their effectiveness will be reported and/or assessed through daily observations, inspections, monthly environment reporting, compliance reporting, internal and external audits and monitoring as outlined in Section 4 of the CEMP.

Consistent with the requirements of CoC C8 and CoC C9, the CTAMP will be reviewed (and submitted to the Secretary for approval where required) in the following circumstances:

- At least one month prior to the commencement of a new phase of the development
- Within three months of:
  - the submission of an annual review under CoC C10;
  - the submission of an incident or non-compliance notification under CoC C13;
  - the submission of an audit under CoC C18;
  - the approval of any modification of the CoCs; or
  - the issue of a direction of the Secretary under CoC A2;

Revisions to the CTAMP may also result from:

- CEMP and or CTAMP review
- Audits (either internal or by external parties)
- Changes to the environmental management system
- Changes to procedures, scope of works and/or systems after an incident or potential incident
- Design changes
- Early Works activity changes
- Changes in the CoCs
- Identification of opportunities for improvement of deficiencies in the Development system (e.g. through the course of site inspections)
- Following complaints.

A copy of the updated plan and changes will be distributed to all relevant stakeholders in accordance with the approved document control procedure.

APPENDIX A COMPLIANCE MATRICES

State Approvals

The Development is being delivered under Part 4, Division 4.1 (now Division 4.7 as of 1 March 2018) of the EP&A Act. The CoCs include requirements to be addressed in this CTAMP-B and delivered during the Development. These requirements and how they have been addressed are provided in the Table 3-12.

Table 3-12 Conditions of Consent

CoC	Requirement	Document Reference	How Addressed
A1	In addition to meeting the specific performance measures and criteria established under this consent all reasonable measures must be implemented to prevent, and if prevention is not reasonable, minimise, any harm to the environment that may result from the construction and operation of the development, and any rehabilitation required under this consent.	Section 3 Section 4	Section 3 of this CTAMP identifies the management measures to be implemented to prevent and minimise environmental harm. Section 4 sets out the process for monitoring and review of the effectiveness of these measures. Opportunities to further minimise environmental harm will be identified through the ongoing evaluation of environmental management performance and effectiveness of this CTAMP-B.
A15	If the submission of any strategy, plan or program is to be staged, then the relevant strategy, plan or program must clearly describe the specific stage of the development to which the strategy, plan or program applies, the relationship of the stage to any future stages and the trigger for updating the strategy, plan or program.	Section 1.6	This CTAMP-B is relevant to Construction Phase A and B works. It supersedes the CTAMP – Phase A (excluding Moorebank Avenue works).
A19	Where conditions of this consent require a document to be prepared in consultation with an identified party, the Applicant must: (a) consult with the relevant party prior to submitting the subject document to the Secretary for approval; (b) provide evidence that at least two weeks was provided for the relevant party to comment on the document; and (c) include in the document: (i) details of the consultation undertaken; (ii) a description of how matters raised by those consulted have been resolved to the satisfaction of both the Applicant and the party consulted; and	Section 1.8 0	(a) Section 1.8and 0 demonstrate that a draft of CTAMP-A and then CTAMP-B was sent to relevant agencies including Liverpool City Council, Campbelltown City Council, and Transport for NSW prior to submission to the Secretary. (b) Section 1.7 details the date that each agency was contacted and date of response from each agency. Appendix A provides evidence of the consultation between SIMTA and relevant agencies that demonstrates a minimum of two weeks was given to each agency to comment on the plan.

CoC	Requirement	Document Reference	How Addressed
	(iii) details of any disagreement remaining between the party consulted and the Applicant and how the Applicant has addressed the matters not resolved.		(c)(i) Section 1.7 provides details of the consultation undertaken (ii) Section 1.7 and the tables in 0 detail issues from agencies and how SIMTA have resolved these issues to the satisfaction of both the agency and SIMTA. (iii) Section 1.7, the tables in 0 and evidence of consultation in 0 provide details on remaining disagreements between agencies and SIMTA and how these issues have been resolved to the satisfaction of both the agency and SIMTA.
A20	All licences, permits, approvals and consents as required by law must be obtained and maintained as required for the development. No condition of this consent removes the obligation for the Applicant to obtain, renew or comply with such licences, permits, approvals and consents.	CEMP – Section 2.5.2 Section 2.1	All applicable licences, permits and approvals will be obtained as required. Approvals, permits and licences required for the Project are discussed in the CEMP in Section 2.5.2. An Environmental Protection Licence (EPL) (No. 21054) was issued by the EPA on 4 June 2018. The licence applies to the Moorebank Precinct areas identified in the Licence premises map condition. Scheduled activities include crushing, grinding or separating, and contaminated soil treatment. The licence enables the importation of material classified under a Resource Recovery Order where the onsite use (approved land use) is consistent with the applicable Resource Recovery Exemption.
B2	Prior to the commencement of early works and construction, the Applicant must prepare a Construction Traffic and Access Management Plan (CTAMP) to the satisfaction of the Secretary. The Plan must form part of the CEMP required by condition C1 and must:	This CTAMP – B	

CoC	Requirement	Document Reference	How Addressed
	(a) be prepared by a suitably qualified and experienced person whose appointment has been endorsed by the Secretary;	Noted	CTAMP-A and CTAMP-B have been prepared by [redacted]. [redacted] was endorsed by the Secretary as a suitably qualified and experienced person on 7 February 2018.
	(b) be prepared in consultation with Council, TfNSW and RMS;	Section 1.8	Consultation with the relevant authorities will be conducted. A summary of consultation undertaken is included in Section 1.8. Evidence of consultation and response to comments is included in 0.
	(c) include details of all transport routes and traffic types to be used for development-related traffic, access and parking arrangements; (i) include a protocol for undertaking dilapidation surveys to assess the existing condition of the transport routes prior to construction works; and (ii)condition of the transport routes following construction works;	Section 3.1 Section 3.2.17 Appendix D	All construction vehicles will use the nominated construction vehicle/ haulage routes to access the Project site. (i) A dilapidation survey will be conducted prior to the works commencing to assess the current condition of the road and describe mechanisms to restore damage that may result due to construction traffic related to the Project. A high-level Dilapidation Survey and Repair Protocol is provided in Appendix D. (ii) a post-construction dilapidation will be conducted to assess the condition of post-construction transport routes. Appendix D provides a further high-level Dilapidation Survey and Repair Protocol.
	(d) include a protocol for the repair of any roads identified in the dilapidation surveys to have been damaged during construction and demolition works;	Appendix D	This is detailed in the Dilapidation Survey and Repair Protocol in Appendix D.
	(e) include details of: (i) staging of construction works; (ii)construction vehicle routes;	(i) Section 1.6 (ii) Section 3.1.5 and 3.1.6	The relevant construction details are provided in Section 3.1 and 3.2:

CoC	Requirement	Document Reference	How Addressed
	(iii) heavy vehicle movements associated with spoil and demolition material transport off-site; (iv) construction traffic generation; (v) hours of construction; (vi) parking for workers; and (vii) access arrangements.	(iii) Section 3.1.5, 3.1.6 and Section 3.2 (iv) Section 3.1.8 (v) Section 3.1.7 (vi) Section 3.2.3 (vii) Section 3.1.5, 3.1.6 and Section 3.2	(i) The staged submission of this CTAMP-B and of construction works is found in Section 1.6. (ii)Construction access routes for proposed construction vehicles are detailed. (iii) The Sections detail heavy vehicle movements and access associated with spoil and demolition material transport off-site. (iv) Construction is anticipated to generate construction traffic (v) Construction hours are defined by the Development Consent. (vi) Details on the anticipated parking for construction workers of the project are outlined (vii) Construction access routes and traffic impacts for proposed construction vehicles are detailed.
	(f) include a Heavy Vehicle Route Plan detailing (i) the origin and destination of spoil / fill and demolition material; and (ii)details of the heavy vehicle routes to and from the site within the Campbelltown and Liverpool Local Government Areas (LGAs).	(i) Section 3.1.6 (ii) Section 3.1.6, Section 3.2, Section 3.3.4	Figure 3-3 provides the Heavy Vehicle Route Plan. (i) Fill haulage routes and indicative spoil sources are found in Section 3.1.6 and Figure 3-3 (ii)All drivers will be required to adhere to the nominated construction truck / haulage routes to/from the site via the M5 and Moorebank Avenue.
	(g) include details of the measures to be implemented to minimise traffic safety issues and disruption to local road users including pedestrians / cyclists during construction works, including:	(i) Section 3.3, 3.2.6	All construction management measures are detailed in Section 3.3. i) All future TCPs will be developed progressively and approved prior to commencement of the works

CoC	Requirement	Document Reference	How Addressed
	(i) temporary traffic controls, including detours and signage; (ii)how two lanes of traffic on Moorebank Avenue will be available at all times during construction (unless otherwise approved by RMS); (iii) temporary traffic controls, including detours and signage; (iv) notifying the local community about development-related traffic impacts; (v) responding to any emergency repair requirements or maintenance during construction; and (vi) a traffic management system for managing oversized vehicles.	(ii) Section 3.2.5 3.3.12 (iii) Section 3.3.1 (iv) Section 3.3.10 (v) Section 3.3.12, Appendix C (vi) Section 3.3.12	associated with that TCP. Approval from TfNSW for the installation of portable traffic signals will be obtained prior to their installation. ii) When upgrade works are being undertaken on Moorebank Avenue, two lanes will be maintained on Moorebank Avenue (unless otherwise approved by TfNSW) iii) As above for (i) iv) Liaison with stakeholders is discussed in Section 3.3.10 and further detailed in the Community Communication Strategy v) Section 3.3.12, and in particular measures TA-30 to 32 outline the process for managing traffic incidents. Appendix C includes details on the process for conducting emergency road repairs. vi) Oversize vehicle trips, if required, will be undertaken consistent with Heavy Vehicle National Law and the Roads and Maritime OSOM Vehicle and Load rules. Refer to management measure TA-11 in Section 3.3.12.
	(h) include a driver's code of conduct that requires: (i) compliance with specified travelling speeds; (ii)drivers to adhere to specified transport routes, including no access from Cambridge Avenue; and (iii) drivers to implement safe driving practices.	Appendix C	The Driver's Code of Conduct is provided in Appendix B: (i) Safe driving and behaviour must be complied with by all drivers, with quarterly reviews of compliance to be undertaken and any remedial actions to be carried out as required. (ii)Drivers must adhere to the approved nominated routes

CoC	Requirement	Document Reference	How Addressed
			(iii) Implementing safe driving practices is a responsibility of all drivers.
	(i) include a program to monitor the effectiveness of these measures; and	Section 4.1	Monitoring requirements for this CTAMP are outlined in Section 4.1.
	(j) detail procedures for notifying residents and the community (including local schools), of any potential disruptions to transport routes.	Section 3.3.10	A Community Communication Strategy has been prepared for the Project. A summary of stakeholder communication is provided in Section 3.3.10.
B3	The Applicant must: (a) not commence early works or construction until the Construction Traffic Management Plan required by condition B2 is approved by the Secretary; and (b) carry out the development in accordance with the most recent version of the Construction Traffic Management Plan approved by the Secretary,	(a) Section 1.4 (b) Section 4.6	(a) CTAMP-A was approved by the Secretary on 15 June 2018. No Construction Phase B works will commence until this CTAMP revision is approved by the Secretary. (b) The most recent, approved version of this CTAMP-B will be implemented to manage the Project activities, as stated in Section 1.4.
B4	A Road Occupancy Licence is to be obtained from the Transport Management Centre for any works that may impact on traffic flows on Moorebank Avenue or the adjoining State road network during construction activities.	Section 2.2.1	A Road Occupancy Licence (ROL) will be obtained as required for the Construction Phase B works addressed in this CTAMP.
B5	A construction zone will not be permitted on Moorebank Avenue without the express approval of RMS.	Section 2.2.1	Prior to the establishment of construction zones on Moorebank Avenue, approval will be sought by Roads and Maritime.
B6	All demolition and construction vehicles must be contained wholly within the site and vehicles must enter the site before stopping.	Section 3.1.5 Appendix B	There is adequate space on the internal access road for construction vehicles to park/queue as required. This is shown on Figure 3-2. This will be included as part of the Driver's Code of Conduct and induction.

CoC	Requirement	Document Reference	How Addressed
B7	All vehicles are to enter and leave the site in a forward direction.	Section 3.1.5, Section 3.2.11 Section 3.2.21	Swept path analysis using the largest construction vehicle will be undertaken for all other proposed temporary construction access points along Moorebank Avenue in advance of the works and submitted to RMS or TMC in line with the process outlined in Section 3.1.5. Section 3.3.12 includes management measure TA-25 which addresses this requirement.
B8	All trucks entering or leaving the site with loads must have their loads covered and must not track dirt onto any public road.	Appendix B	This is included in the Driver's Code of Conduct.
B9	Prior to commencement of any importation of site fill, the Applicant must undertake a Road Safety Audit for heavy vehicle movements associated with the importation of fill, for construction vehicle swept paths in and out of the development site via the proposed temporary construction access points along Moorebank Avenue, and for motorists and construction vehicle movements along Moorebank Avenue during the staged road upgrade works identified in condition B13. The Road Safety Audit is to be prepared by an independent TfNSW accredited road safety auditor in accordance with the relevant Austroads guidelines to identify any safety issues. The Road Safety Audit must consider road safety issues for the proposed construction access arrangements and affected vehicle movements during upgrade works on Moorebank Avenue. The Applicant must recommend corrective actions for the identified safety issues and propose appropriate traffic management measures (i.e. temporary traffic signals and other traffic management measures) in consultation and with the approval of the relevant Council, TfNSW and RMS.	Section 3.3.12	A Road Safety Audit dated 19/02/18 has been undertaken for CTAMP-A. No corrective actions were identified. The Road Safety Audit will be updated to consider road safety issues for construction vehicle swept paths in and out of site associated with future temporary access points along Moorebank Avenue (Construction Phase B) prior to the commencement of these works. This updated Road Safety Audit will be undertaken as part of the 85% Detailed Design under the Roads and Maritime WAD process.

CoC	Requirement	Document Reference	How Addressed
B10	The swept path of the longest vehicle entering and exiting the subject site, as well as manoeuvrability through the site, must be in accordance with Austroads requirements. Prior to commencement of construction on permanent infrastructure a plan must be submitted to the Secretary and RMS for approval, which shows that the proposed development complies with this requirement.	Section 3.1.5 Appendix E	Swept Path analysis is included as Appendix E to this plan. RMS noted in consultation that evidence of compliance with this condition is required for review and approval as part of the WAD for the temporary diversion road and Moorebank Avenue upgrades. The executed WAD demonstrates that this has been fulfilled.
B13	The Applicant is to undertake the following upgrades, in accordance with the specified timing requirements [refer Table 1: Required Upgrades and Specified Timing Requirements]	Section 1.1 Section 1.3.3 Section 1.5	Moorebank Avenue upgrade requirements are subject to ongoing design development and approval by RMS as part of the WAD process. 100% design approval of the Moorebank Avenue upgrade is subject to ongoing review by the RMS WAD team. The timing for completion of the upgrade will be prior to issue of an Occupation Certificate for warehousing in excess of 100,000m2 of gross floor area
B14	A Works Authorisation Deed(s) (WAD) with RMS is to be executed by the Applicant for the infrastructure listed in condition B13 prior to the issue of the first Occupation Certificate for warehousing.	Section 2.2.1	The RMS WAD process is ongoing and will be executed for the infrastructure listed in condition B13 prior to the issue of the first Occupation Certificate for warehousing.
B15	Traffic Control Signal (TCS) plans must be drawn by a suitably qualified person and endorsed by a suitably qualified practitioner. The designs submitted to RMS must be in accordance with *Austroads Guide to Road Design* in association with relevant RMS supplements (available on www.rms.nsw.gov.au).	Section 2.2.3	Traffic Control Signal (TCS) plans will be prepared by a suitably qualified person, endorsed by a suitably qualified practitioner and be submitted to Roads and Maritime for consideration and approval prior to the commencement of applicable works.

CoC	Requirement	Document Reference	How Addressed
B16	RMS fees for administration, plan checking, civil works inspections and project management must be paid by the Applicant prior to the commencement of works. The Applicant may be required to dedicate land for the maintenance of the traffic control lights. Further details will be included in the WAD process.	Section 2.2.1	RMS fees will be paid in accordance with RMS requirements.
B17	The proposed road upgrade, road raising and widening works by the Applicant along Moorebank Avenue must be designed to meet RMS requirements, and endorsed by a suitably qualified person(s). The design requirements must be in accordance with Austroads guidelines and other Australian Codes of Practice.	Section 2.2.1	Approval of the design of the Moorebank Avenue upgrade works is being managed as part of the RMS WAD process. The RMS WAD process is ongoing and will be executed for the Moorebank Avenue upgrade works listed in condition B13 prior to the issue of the first Occupation Certificate for warehousing.
B19	The Applicant is responsible for all works required by public utility adjustment/relocation works necessitated by the road infrastructure upgrade works and as required by the various public utility authorities and/or their agents.	Section 2.2.1	Approval of the design is being managed as part of the RMS WAD process and in consultation with applicable public utility authorities.
B20	All works / regulatory signposting associated with the road infrastructure upgrades must be approved by RMS	Section 3.3.2	Prior to the commencement of the road infrastructure upgrade works, approval for all works / regulatory signposting will be sought from Roads and Maritime.
B76	Use of compression brakes for construction vehicles associated with the project that are on site or on nearby roads is not permitted (e.g. Anzac Road).	Table 24 (CNVMP)	Refer to the CNVMP for the details on the use of compression brakes and the management measure outlined in Table 24 of this CTAMP-B.
B77	(h) a truck driver protocol addressing designated routes, acceptable delivery hours, speed limits on site, no engine braking in the vicinity or on site, no extended periods of engine idling, avoiding queuing in or around the site and limiting the need for reversing on site	Appendix B – Drivers Code of Conduct Figure 3-2 Figure 3-3	Appendix B and Figure 3-2, and Figure 3-3 address the requirements of this CoC.

CoC	Requirement	Document Reference	How Addressed
C7	The Applicant must ensure that the environmental management plans required under this consent are prepared in accordance with any relevant guidelines, and include: (a) detailed baseline data;	Section 3	Section 3 details relevant data related to traffic impacts surrounding the Project site.
	(b) a description of: (i) the relevant statutory requirements (including any relevant approval, licence or lease conditions); (ii) any relevant limits or performance measures/criteria; and (iii) the specific performance indicators that are proposed to be used to judge the performance of, or guide the implementation of, the development or any management measures;	Section 1.2 Section 2.1 (i) Section 1.6, Table 3 (ii) Section 1.6, Table 3	(i) Section 1.2 provides information on the approvals required for the Project site. Section 2.1 lists the environmental obligations for the Project site. (ii) Section 1.6, Table 3 details the objectives (performance measures/criteria) for the Project. (iii) Section 1.6, Table 3 details the targets (specific performance indicators) for the Project.
	(c) a description of the management measures to be implemented to comply with the relevant statutory requirements, limits or performance measures/criteria;	Section 3.3.12	Table 24 stipulates the traffic related management measures for the Project.
	(d) a program to monitor and report on the: (i) impacts and environmental performance of the development; and (ii) effectiveness of any management measures (see (c) above);	(i) Section 4.1 (ii) Section 4.6	(i) Program on monitoring and reporting of impacts and environmental performance is discussed under Section 4.1. (ii) Section 4.6 states ongoing evaluation on performance and effectiveness will be undertaken against policies, objectives and targets identified in Section 1.6 of this plan.
	(e) a contingency plan to manage any unpredicted impacts and their consequences;	Table 24, TA-30 to TA-36 Appendix C	These management measures detail requirements to be undertaken in the event of a traffic incident response such as an accident, spillage, or flooding, or in the event of unpredicted impacts.

CoC	Requirement	Document Reference	How Addressed
			Appendix C includes details on the process for conducting emergency road repairs.
	(f) a program to investigate and implement ways to improve the environmental performance of the development over time;	Section 4.6	Review and improvement of this CTAMP-B will be undertaken annually and periodically in accordance with Section 4.5 of the CEMP as discussed under Section 4.6 of this CTAMP-B.
	(g) a protocol for managing and reporting any: (i) incidents and non-compliances; (ii) complaints; (iii) non-compliances with statutory requirements; and	Refer to next column	(i) Managing and reporting for incidents will be undertaken in accordance with CEMP Section 2.8. (ii) Complaints will be managed in accordance with the Community Communication Strategy. (iii) Non-conformances will be undertaken in accordance with CEMP Section 4.4.
	(h) a protocol for periodic review of the plan.	Section 4.6	Section 4.6 of this CTAMP-B outlines the requirement for review of this plan. Further detail is provided within the CEMP Section 4.5.

The Final Compilation of Mitigation Measures (FCMMs) were prepared as part of the MPE Stage 2 Submissions Report (Arcadis 2017). A list of the FCMMs as relevant to the Development and how they have been complied with in this CTAMP-B are provided in .

Table 3-13 Final Compilation of Mitigation Measures (FCMM)

FCMM	Requirement	How Addressed
0B	The Construction Environmental Management Plan (CEMP), or equivalent, for the Amended Proposal will be based on the PCEMP (Appendix G of the EIS), and include the following preliminary management plans: • Preliminary Construction Traffic Management Plan (PCTMP) (Appendix K of the EIS) As a minimum, the CEMP will include the following sub-plans: • Construction Traffic Management Plan (CTMP)	This CTAMP – B
1A	A Construction Traffic Management Plan (CTMP) will be prepared, based on the PCTMP prepared as part of the EIS (refer to Appendix K of the EIS). The CTMP will detail the management controls to be implemented to avoid, minimise and mitigate impacts of construction of the Amended Proposal to traffic performance on the surrounding road network, pedestrian and cyclist access, and the amenity of the surrounding environment and will include the following key initiatives: • Review of speed restrictions along Moorebank Avenue and additional signposting of speed limitations to reinforce reduced speed limits during construction of the Amended Proposal • Restriction of haulage routes through signage and education to ensure, where possible, that construction vehicles do not travel through nearby residential areas to access the Amended construction area, in particular Moorebank (Anzac Road) or the Wattle Grove residential areas • Inform local residents (in conjunction with the Community Information and Awareness Strategy) of the proposed construction activities and road access restrictions that the construction traffic must adhere to and establish communication protocols for community feedback on issues relating to construction vehicle driver behaviour and construction related matters • Installation of specific warning signs on approach to, and at entrances to, the construction site to warn existing road users of entering and exiting construction traffic • Establishing pedestrian exclusion zones and walking routes/crossing points which integrate within the existing pedestrian network	This CTAMP-B satisfies this condition for Construction Phase B. This plan supersedes CTAMP – Phase A (refer to Section 1.4) Section 2.2.2 Section 3.2.11 Section 3.3.10 Section 3.3.1 Section 3.2.5 Section 3.3.10 Section 3.3.1 Section 3.3.2 Section 3.3 Section 3.3 Section 3.3

FCMM	Requirement	How Addressed
	• Distribution of day warning notices to advise local road users of scheduled construction activities and associated traffic movements. • Installation of appropriate traffic controls and warning signs for areas identified where potential safety risk issues exist • The promotion of car-pooling for construction staff and other shared transport initiatives during the construction phase • Management and coordination of the transportation of materials to maximise vehicle loads and therefore minimise vehicle movements • Monitoring of traffic on Moorebank Avenue during peak periods to ensure that queuing at intersections does not impact on other road users • Reducing, where reasonable and feasible, the volumes of construction vehicles travelling during peak periods, especially if the increase in traffic generated by construction activities impedes on the operation of Moorebank Avenue	
1B	A Road Safety Audit on Cambridge Avenue to be undertaken prior to the commencement of the construction of the Amended Proposal to identify the traffic safety risks and determine appropriate mitigations.	Section 3.3.12 FCMM 1B requires a Road Safety Audit to be undertaken on Cambridge Avenue. An audit of the entrance from Moorebank Avenue has also been undertaken and will be provided to DPHI for information in accordance with CoC B9.
1C	Moorebank Avenue will be upgraded for approximately 1.5 kilometres from approximately 35 metres south of the northern boundary of the MPE Site to approximately 185 metres south of the southern MPE Site boundary. The following intersections will also be upgraded as part of the Amended Proposal: • Moorebank Avenue / MPE Stage 2 • Moorebank Avenue / MPE Stage 1 northern access • Moorebank Avenue / MPE Stage 1 central access	The works associated with traffic lights and road upgrade works detailed in CoC B13 are to be designed and delivered at no cost to TfNSW or Roads and Maritime unless otherwise agreed by TfNSW and Roads and Maritime, in accordance with CoC B18.

FCMM	Requirement	How Addressed
	• Moorebank Avenue / MPE Stage 1 southern emergency access. The funding of these upgrades will be clarified through discussions with SIMTA, Roads and Maritime and Transport for NSW.	
1G	Importation of fill to site during construction of the Amended Proposal is to not exceed a total of 22,000 m3 of material per day. This limit is to be further reduced by an amount equivalent to any fill being imported to the MPW Stage 2 Proposal (SSD 7709) on the same day such that the combined importation of fill to the Amended Proposal site and MPW site does not exceed 22,000 m3 on any given day.	Fill importation will not exceed 22,000 m3 of material per day in accordance with CoC B56(a). Appendix D – Fill Importation Management Protocol.

EPBC Approvals

The EPBC Act approval for the MPE Concept was granted by the Department of the Environment in March 2014 (No. 2011/6229). This approval was provided for the impact of the MPE Development on listed threatened species and communities (Sections 18 and 18A of the EPBC Act) and Commonwealth land (Sections 26 and 27A of the EPBC Act).

The EPBC Act approval for the MPW Concept was granted by the Commonwealth Department of Environment and Energy (DotEE) in September 2016 (No. 2011/6086). This approval was provided for the impact of the MPW Development on listed threatened species and communities (Sections 18 and 18A of the EPBC Act) and Commonwealth land (Sections 26 and 27A of the EPBC Act).

The Moorebank Avenue upgrade works will be performed under the MPE Stage 2 Consent as described in Section 1.1 and 1.3 of the CEMP. Since the western side of the Moorebank Avenue upgrade works construction footprint is located within the MPW site, the works must comply with the MPW Commonwealth Approval.

The construction and operation of the Development has been designed to be consistent with the EPBC Act Approval conditions, where relevant. EPBC Act Approval conditions for the Development include specific conditions and commitments that are required to be addressed in this CTAMP-B. These conditions are identified within along with where they have been addressed in preparing this plan.

Table 3-14 Commonwealth Conditions of Approval (CoA)

	Condition Requirement	How Addressed
MPE EPBC Approval (2011/6229)		
7	For the better protection of Commonwealth land, the person taking the action must engage a suitably qualified expert(s) to prepare a Construction Environment Management Plan (CEMP), for the approval of the Minister. The CEMP must include in relation to construction of the proposed facility:	CEMP
	b) identification and quantification of all potential impacts associated with noise, vibration, air quality, traffic, light spill, hydrological changes, contamination, and indigenous heritage (including cumulative impacts associated with the DoF's proposed intermodal) upon Commonwealth land. Consideration must be given to people and communities at SME, DNSDC, Defence housing, and the environment more generally in neighbouring bushland areas. Of note, the air quality assessment must quantify all emissions arising from air pollutant sources for which there are established national air quality standards;	Traffic impacts addressed in Section 3.2 of this CTAMP Note: The School of Military Engineering (SME) and Defence housing have been relocated off the MPW Site to the Holsworthy Barracks and are no longer sensitive receivers to the MPE Site. The Defence National Storage and Distribution Centre (DNSDC) formerly occupied the MPE Site but relocated this operation to the Defence Joint Logistics Unit (DJLU) immediately north of the MPE Site.
	d) refined details (including implementation timeframes) for the mitigation measures outlined in the EIS (sections 7.4.2, 7.4.3, 7.4.6, 7.4.7, 7.4.8 and 7.4.9) and summarised at Annexure A.	Traffic mitigation measures addressed in Section 3.1 and Section 3.3.12 of this CTAMP
MPW EPBC Approval (2011/6086)		
5	Sections of the CEMP and OEMP relating to Aboriginal heritage must be prepared by a suitably qualified expert and must: a) be consistent with the Aboriginal Heritage Provisional Environmental Management Framework (2 July 2014), provided at Appendix 0 to the finalised EIS	The management measures outlined in Section 3.3 are consistent with the Traffic, Transport and Access Provisional Environmental Management Framework.
	b) incorporate all measures 12A to 12G from Table 7.1 of the finalised EIS that are described as 'mandatory'	Table 9
	c) explain how all measures 12A to 12G from Table 7.1 of the finalised EIS that are described as 'subject to review' have been addressed	Table 9
	d) be approved by the Minister or a relevant New South Wales regulator.	Revision G of this CTAMP-B was approved by the delegate of the Federal Minister for the

Condition Requirement	How Addressed
	Environment and Energy on 27 September 2019.

The MPE Concept Plan was originally approved on 14 September 2011. The most recent modification to the approval was granted on 31 January 2018 subject to the (modified) Conditions of Approval (CoA). Concept Plan CoAs relevant to this plan are identified in Table 10.

CP CoA	Requirements	Document Reference
Traffic and Transport	Any future Development Application shall include a Traffic Impact Assessment that assesses intersection and road network impacts, including impacts on Cambridge Avenue. The traffic assessment shall:	Construction related impacts for the Project are addressed in relevant sections of this CTAMP
	a) undertake detailed model analysis commensurate with the stage, to confirm network operation and identify intersection upgrade requirements;	Required road upgrades and associated timing is identified by CoC B13.
	b) consider the constructability constraints of proposed upgrade(s) at key intersections, such as vehicle sweep paths, geometry and sight lines;	Road upgrades to be the subject of a Works Authorisation Deed with Roads and Maritime.
	c) assess construction traffic impacts, including:	
	i. the identification of routes and the nature of existing traffic on these routes	Section 3.1.6 and Section 3.1.7 detail construction access and fill haulage routes. The impact of these routes on the nature of existing traffic is found in Section 3.2.
	ii. an assessment of construction traffic volumes (including spoil haulage/delivery of materials and equipment to the road corridor and ancillary facilities); and	Details on construction traffic volume is found in Section 3.
	iii. potential impacts to the regional and local road network (including safety and level of service) and potential disruption to existing public transport services and access to properties and businesses.	Detailed potential traffic impacts are detailed in Section 3.2.
	d) assess operational traffic and transport impacts to the local and regional road network, including:	Further consideration and monitoring to occur as part

CP CoA	Requirements	Document Reference
	i. changes to local road connectivity and impacts on local traffic arrangements, road capacity/safety;	of the Operational Traffic and Access Management Plan (CoC B26) and the associated Biannual Trip Origin and Destination Report.
	ii. traffic capacity of the road network and its ability to cater for predicted future growth and	
	iii. monitoring of vehicle numbers on Cambridge Avenue.	
	e) provide an updated Traffic Management and Accessibility Plan including:	This CTAMP – B
	i. measures to prevent heavy vehicles accessing residential streets to maintain the residential amenity of the local community	Section 3.1
	ii. public transport	Section 3.2.4
	iii. cyclist facilities; and	Section 3.2.5
	iv. driver code of conduct	Section 3.3.4
	In particular, the Traffic Impact Assessment must identify upgrades and other mitigation measures required to achieve the objective of not exceeding the capacity of the following intersections and roads –	Required road upgrades and associated timing is identified by CoC B13.
	(a) Moorebank Avenue/ Newbridge Road	Section 3.3.12
	(b) Moorebank Ave/ Heathcote Road	
	(c) Cambridge Ave	
	(d) M5 Motorway/ Moorebank Avenue	
	(e) M5 Motorway/ Heathcote Road	
	(f) M5 Motorway/ Hume Highway.	

Other Approvals

The Revised Statement of Commitments (RSoC) includes the most recent compilation of SIMTA commitments to mitigate the environmental impacts, monitor the environmental performance and/or achieve a positive environmentally sustainable outcome. These RSoCs (June 2017) were presented in the Moorebank Precinct East – Concept Plan Modification 2 Response to Submissions. The RSoC that are relevant to this plan are identified in .

Table 3-15 Revised Statement of Commitments (RSoC) – MPE Development Concept Plan

RSoC	Requirement	How Addressed
Traffic and Access	The Proponent commits to developing a Construction Traffic Management Plan to minimise the potential impacts of the construction stage(s), including: • Heavy vehicle access routes • Location of construction worker parking • Mitigation measures to avoid any unacceptable impacts on the surrounding land uses. Mitigation measures to avoid any unacceptable impacts on regular bus services and school bus services operating on roads within the vicinity of the site and pedestrian and cyclist access	This CTAMP-B Section 3

APPENDIX B EVIDENCE OF CONSULTATION

APPENDIX C DRIVER'S CODE OF CONDUCT

Purpose and Objective

The Driver's Code of Conduct aims to minimise the impacts of construction traffic on the external road network, including adjoining properties. The purpose of this Code is to promote and encourage safe driving practices as well as define and detail acceptable behaviour and procedures for all heavy vehicle drivers associated with the construction of the Development.

Responsibilities of Drivers

- Drivers are to follow ALL rules and regulations required by law including:
  - Hold a current and valid license for the vehicle class they are operating
  - Always carry your current driver's license with you while you are on duty
  - Comply with all posted and/or Road Work speed limits on all roads
  - Adhere with the posted vehicle load limits on all roads
  - Comply with all construction traffic signs and devices
  - Do not overload vehicles beyond its maximum load limits and/or relevant approvals
- Drivers are to practise safe driving and behaviour which includes, but is not limited to:
  - Comply with State Road regulations and the Australian Road Rules and any other directives issued by the Principal's Representative
  - Drive in a manner that is appropriate with road and weather conditions
  - Not operating any machines whilst suffering from fatigue or under the influence of drugs and/or alcohol.
- Drivers must always behave in a professional manner. No yelling or abusing others.
- Drivers must adhere to the approved nominated routes for each specific construction activity and consistent with the CTAMP (refer to Figure 3-3) and they must not use roads if their weight is over the posted load limit
- No access from Cambridge Avenue will be permitted, as per CoC B2(h)
- Drivers must not consume or be under the influence of alcohol or drugs whilst on duty
- Drivers are to avoid queuing in or around the site and limit the need for reversing on site
- Drivers are to enter the site before stopping and are not to queue on any public road, unless approved and agreed with relevant authorities (e.g. TfNSW and Local Councils)
- Drivers are to arrive and depart from site during approved construction hours, 7 am to 6 pm Monday to Friday and 8 am to 1 pm on Saturday, unless otherwise approved with relevant authorities. Drivers will be turned away if they arrive outside of approved hours.
- Drivers making material deliveries are to arrive and depart during approved extended work hours, 6am to 10pm, Monday to Friday, and 7am to 5pm on Saturday, unless otherwise approved with relevant authorities. Drivers will be turned away if they arrive outside of approved hours.

- Drivers must never leave the vehicle with the engine running. Drivers parking are to engage the park brake and leave the vehicle in gear.
- Drivers must adhere to the 20km/hr speed limit on site, unless stated otherwise
- Drivers must attempt to limit the amount of reversing on site.
- Drivers must not use engine braking on or within the vicinity of site.
- Drivers leaving their vehicle must wear appropriate personal protective equipment.
- Drivers must enter and exit the site gates in a forward direction, in accordance with CoC B7. Under no circumstances are drivers allowed to reverse onto a public road, unless approved by the relevant authorities.
- Vehicles must avoid the transfer of dirt or debris (as much as possible and practical) onto public roads. If any materials are deposited on the roads, Supervisors/ Foremen must be contacted immediately to initiate cleanup
- All drivers must carry out their duties in a way which does not adversely affect their health and safety or that of others
- All drivers must only perform tasks for which they have authorisation and/or the necessary training, and for which all necessary safety arrangements are in place
- All trucks entering site must have their loads covered from the point of origin
- Prior to leaving site covering truck loads is mandatory and when required, tailgates must be swept clean before leaving site
- If approached by individuals with enquiries about the Development, drivers are not to engage with the individual beyond providing them with the Development Manager (Communications) contact details

Monitoring

At the commencement of each shift or day's work, drivers working on site will attend Toolbox meetings held by the supervisor, where drivers will be updated on Work Health and Safety issues that may have arisen from the previous shift or day's work. A copy of the Driver's Code of Conduct will be made available on the site for drivers to review.

Delivery drivers for import material will adhere to the Driver's code of conduct issued to them to deliver by their trucking companies before attending the site.

Failure to comply with this Driver's Code of Conduct may lead to either the issue of a warning notice or disciplinary action. In addition to this, supervisors will be required to undertake formal observations / review of compliance at three monthly intervals and document and undertake any remedial actions with personnel as required.

Some non-compliances may also carry penalties such as fines and demerit points under the Road Rules and environmental protection legislation.

This Code will be reviewed annually and updated as required.

APPENDIX D PROTOCOL FOR UNDERTAKING DILAPILATION SURVEYS AND REPAIRS

Purpose and Objective

For the purpose of the Development, a Dilapidation Survey will be conducted prior to the commencement of any construction activities to provide a visual assessment of the existing condition of surrounding road infrastructure and facilities on the basis of the prevailing structural, soil and weather conditions at the time of the survey.

Following completion of construction activities, a post-construction Dilapidation Survey will be conducted to assess potential damage that may have resulted from the construction of the Development.

Procedure

An on-site inspection will be carried out as part of the Dilapidation Survey (before construction and following construction) to record existing cracks and/or defects found at the time of the survey. The survey will be generally confined to those parts of the Roadway, which are reasonably accessible at the time of the survey. A Dilapidation Survey Report will be prepared to present the findings of the assessment, including providing photographic record of existing cracks and/or defects.

The Dilapidation Survey will take into account the following (but not limited to):

- Kerb and gutter (likely to be within a vehicle/s path)
- Speed humps
- Existing vegetation
- Street furniture
- Any existing damage to road pavement or road furniture
- Existing potholes/pavement damage
- Cracking and rutting
- Road pavement deflection testing of the construction truck routes at 20 m intervals along all wheel paths
- Any existing structures
- Any existing damaged items.

The Dilapidation Survey Report will be submitted to the Secretary and Local Councils for information prior to the use of local roads for construction traffic. Following the completion of the construction activities, an updated Dilapidation Survey Report will be prepared to assess any damage that may have resulted from the construction of the Development. The Contractor will be responsible to restore or reinstate roads affected by the Development in a timely manner, in accordance with the reasonable satisfactory of the relevant authorities.

Criteria and Timing

Throughout Early Works, the Contractor shall monitor the roads on a monthly basis. Any damage caused by the Early Works will be raised to the relevant Council and/or Roads and Maritime representative to seek permit approvals/concurrence to allow for remediation

works. Once the road is repaired, photos will be taken and recorded in accordance with the maintenance procedure, as shown in the figure below.

The defects shall be categorised as low to high risk, with high risk defects actioned within 24 hours. The defect rating classification is described the table below.

The Contractor will then inform the relevant authorities to inspect the works.

Defect Rating	Description	Response Time
High	Defect may cause serious injury or large-scale property damage.	With 24 hours
Medium	Noticeable cracks/defects which can be readily filled/rectified. Defect is unlikely to cause injury/property damage.	With 2 weeks
Low	Fine and hairline cracks/defects which do not need repair.	No works required. Typical wear and tear.

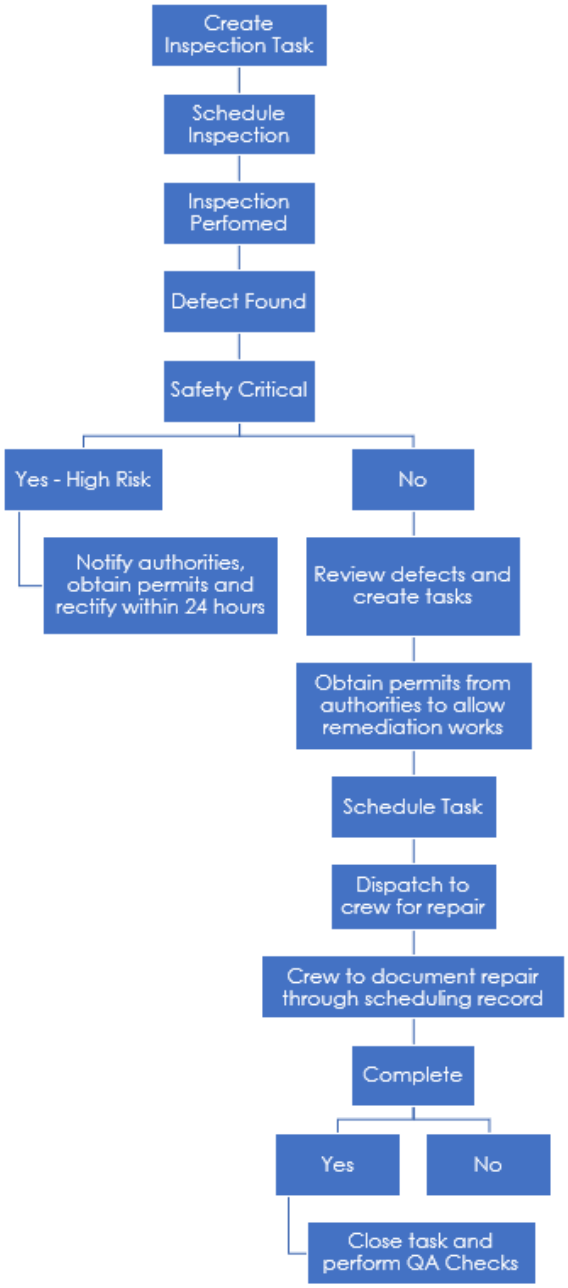
Maintenance and/or Emergency Repairs

Maintenance and/or emergency repairs will be undertaken upon the completion of the construction works or as soon as practicable, where the damage represents a safety risk. The process will include the following:

- Once damage that presents a safety risk is identified, the Site Supervisor and Contractor's WM will be notified
- Site Supervisor will implement traffic control and safety measures to reduce the safety risk to the public
- The Contractor's WM will notify Roads and Maritime and LCC of the safety issue
- In consultation with Roads and Maritime and LCC, an appropriate repair plan will be agreed and implemented as soon as practicable.

Restoration and repair of roads affected by the construction works will be undertaken in a timely manner in accordance with Council and Roads and Maritime requirements at the expense of the Contractor.

Reporting Protocol



APPENDIX E SITE ACCESS AND EXIT SWEPT PATH ANALYSIS
